REPORT

OF THE

GENERAL MANAGER OF RAILWAYS

FOR THE

YEAR ENDED 31st DECEMBER, 1906.

Natal Government Railways,

General Manager's Office,

Pietermaritzburg, 10th April, 1907.

THE HONOURABLE THE MINISTER OF RAILWAYS AND HARBOURS, SIR,—

- 1. On the 25th January, 1906, I assumed the duties of General Manager, Sir DAVID HUNTER, K.C.M.G., then retiring under the age limit.
- 2. I have now the honour to submit, for the information of the Government, the Report and Accounts of the Railway Department for the year ended 31st December, 1906.

Capital Account.

3. The expenditure on the capital account during the year amounted to £627,304, made up as follows*:—

Additions and Improve	ments to C	pen Lines	, 		£143,281
New Branch Lines	•••	•••	•••	•••	484,023
Total				•••	627,304
Expenditure in previous	is years	•••	•••	•••	13,065,665
Grand	l total		•••	•••	£13,692,969
	(+0 1	11			

(* See also Appendices Nos. 12 and 13),

Revenue and Expenditure.

- 4. The total revenue amounted to £1,836,916 as against £2,034,937 for the year 1905, a decrease of £198,021, or 9.73 per cent.
- 5. The working expenditure amounted to £1,236,611 compared with £1,289,459 for 1905, a decrease of £52,848, or 410 per cent. This expenditure includes £17,067 upon additions and improvements to buildings, ways and works.
- 6. The working expenditure amounted to 67'32 per cent. of the gross revenue, as against 63'37 per cent. for the preceding year, or an increase of 3'95 per cent.

7. FINANCIAL RESULTS OF WORKING DURING YEARS 1906-1905-1904.

Particulars.	1906.	1905.	1904.	Particulars,	1906.	1905.	1904.
To Working Expenses, including Betterments ,, Interest on Capital and Sinking Fund Contribution	£ 1;236,611 } 537,937	£ 1,289,459 450,330	£ 1,531,210 385,210	By Earnings	£ 1,836,916	£ 2,034,937	£ 1,933,934
Total Net Credit Balance	1,774,548	1,739,789 295,148	1,915,420 17,514				
GRAND TOTAL	£1,836,916	£2,034,937	£1,933,934	GRAND TOTAL	£1,836,916	£2,034,937	€1,933,934

8. The following figures set forth in comparative form the annual Revenue during the last five years:—

PARTICULARS.		REVENUE.							
	1906.	1905.	1904.	1908.	1902.				
Passengers Parcels Mails Rents and Miscellaneous Goods, Minerals, and Live Stock	424,705 41,487 10,799 59,844 1,300,081	457,179 42,588 7,850 67,954 1,459,366	453,875 41,354 5,644 53,544 1,379,517	484,123 46,352 4,961 53,516 1,972,599	516,023 44,972 4,505 50,461 1,430,155				
Total	1,836,916	2,034,937	1,933,934	2,561,551	2,046,116				

9. The Expenditure for the past five years was as follows:-

SERVICE.	WORKING EXPENDITURE.							
	1906.	1905.	1904.	1903.	1902.			
Maintenance of Ways and Works Locomotive Power Repairs and Renewals of Carriages & Wagous Traffic Expenses General Charges Works Renewals and Improvements	£ 164,176 468,586 151,228 359,652 *75,902 17,067	£ 162,129 497,906 139,767 380,841 66,809 42,007	£ 177,631 585,282 185,768 384,658 68,169 129,702	202,949 649,364 171,000 450,411 73,525 243,859	176,432 585,498 124,650 361,184 60,738 125,521			
	1,236,511	1,289,459	1,531,210	1,791,108	1,434,023			

10. The working conditions during the year have been of a peculiarly difficult nature. In addition to continued trade depression in the Transvaal, which seriously affected our overberg trade, we had to contend with Native unrest and rebellion in Natal, and the prevalence of Malaria on the Coast. Our passenger as well as goods earnings were thus materially decreased, while on the expenditure side, the opening of 117 miles of new line, the increased cost of coal, and the conveyance of an additional 141,244 tons of export coal rendered an increase rather than a decrease in working expenses, probable. Under these adverse circumstances, therefore, a saving in expenditure of £52,848, and a net profit result to the Colony on the working of the Railways of £62,368, after payment of all interest and sinking fund charges, cannot be considered as altogether unsatisfactory. In view of the heavy reductions effected in working expenditure during the last few years and the increase of low grade traffic, it should be realised that further progress in the direction of decreased working expenses will be difficult.

SUMS SPENT BY THE RAILWAY DEPARTMENT IN THE COLONY.

11. The following sums were spent by the Railway Department in the Colony, and reflect the shrinkage that has taken place in the expenditure as a whole during the past three years:—

1905. 1904. £28**7,**542 £279,853 £281,139 Salaries 688,732 714,901 754,961 Wages 996,040 968,585 1,042,503 199,887 184,275 258,070 Stores purchased £1,300,573 Gross Total ... £1,168,472 £,1,180,316

Traffic Fluctuations in 1906.

12. Analysis of Passenger Traffic.—The following statement shews a decrease in the total number of passengers conveyed during the year of 28,680, and in revenue of £32,391.

		Class.	1906.	1905,	19	06.

-	ounted for sena		<u> </u>		10,000	

* Not accounted for separately during 1905.

14. The most notable features in the foregoing figures are:-

(a.) The decrease in the imported general merchandise which is the main revenue producing traffic, and has declined in comparison with the previous year by 64,837 tons, or 11'42 per cent. In the Colonial produce, the mealie traffic has declined by 36,141 tons, or 41'21 per cent., while mineral traffic,—excluding coal,—has decreased by 37,300 tons, or 10'68 per cent.

(b.) Sugar cane has increased by 76,278 tons, or 162 47 per cent.; fruit by 5,188 tons or 35 56 per cent., and potatoes by 3,147 tons or 36 57 per cent. The coal traffic has increased by 93,028 tons or 10 05 per cent.; horses, cattle, etc., by 10,639 or 28 77 per cent., and sheep, pigs, etc., by 10,086 or 12 39 per cent.

Traffic for Overberg.

15. The proportions of receipts from traffic conveyed through Natal to or from Overberg stations in comparison with the local traffic for the last three years are as follows:-

	1906.	Per Cent, of 1905.		Per Cent. of Total.	1904.	Per Cent. of Total,	
Foreign Traffic with Overberg	£ 923,765	% 50 ·2 9	£ 1,141,949	% 56·00	£ 1,048,630	°/ _o 54 · 00	
Traffic between Stations in Natal (local)	913,151	49:71	892,988	44-00	885,303	46.00

^{*} Not accounted for separately during 1905.

- 14. The most notable features in the foregoing figures are:
 - (a.) The decrease in the imported general merchandise which is the main revenue producing traffic, and has declined in comparison with the previous year by 64,837 tons, or 11.42 per cent. In the Colonial produce, the mealie traffic has declined by 36,141 tons, or 41.21 per cent., while mineral traffic,—excluding coal,—has decreased by 37,300 tons, or 10.68 per cent.

(b.) Sugar cane has increased by 76,278 tons, or 162 47 per cent.; fruit by 5,188 tons or 35 56 per cent., and potatoes by 3,147 tons or 36 57 per cent. The coal traffic has increased by 93,028 tons or 10 05 per cent.; horses, cattle, etc., by 10,639 or 28 77 per cent., and sheep, pigs, etc., by 10,086 or 12 39 per cent.

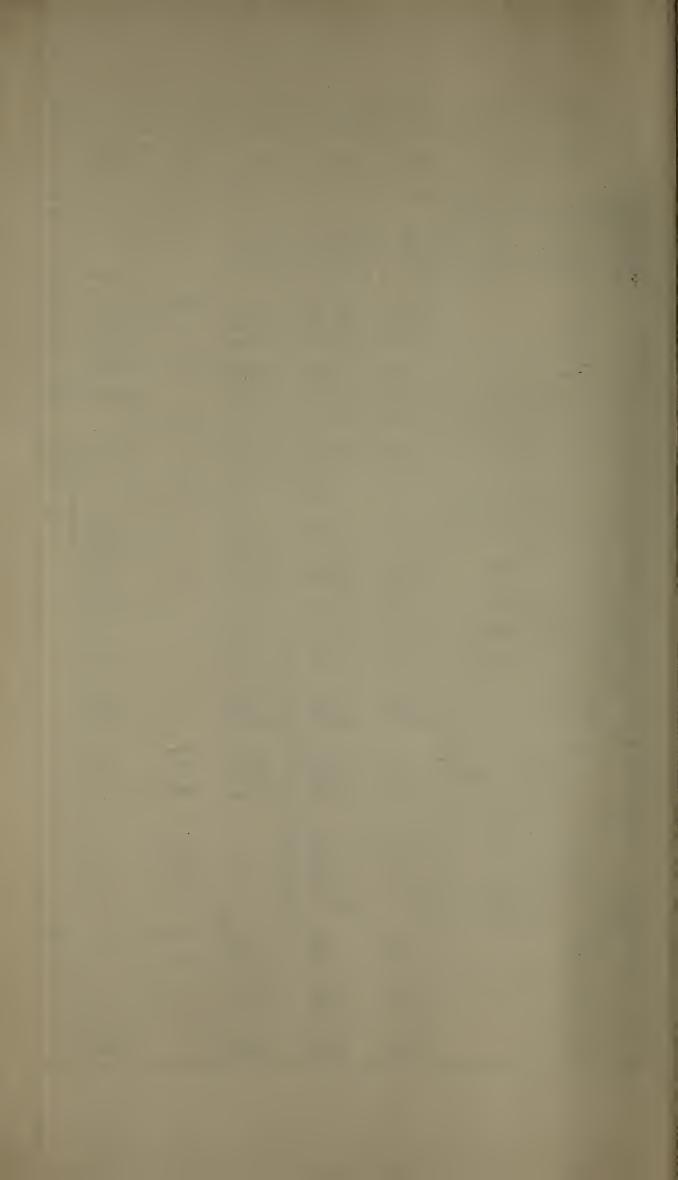

Traffic for Overberg.

15. The proportions of receipts from traffic conveyed through Natal to or from Overberg stations in comparison with the local traffic for the last three years are as follows:—

	1906. Per Cent, of Total.		1905.	Per Cent. of Total.	1904.	Per Cent. of Total.

Rates and Fares.

- 17. In March, representatives of the several South African Governments met in Conference at Pietermaritzburg, in order to decide matters affecting South African Railway Tariffs. Several principles were there affirmed, and considerable reductions in the rates for certain articles were agreed to.
 - (a.) The freight for South African Sugar in through traffic was reduced to a rate of 1d. per ton per mile over the lines of the Central South African Administration.
 - (b.) The through rates on South African Wheat and Wheaten Meal and Flour, and on Grain generally imported into South Africa from oversea were substantially reduced.
 - (c.) A number of minor adjustments in rates were also effected.
- 18. The important principle was agreed to that in the event of a reduction being made in the through rates from Ports to the Transvaal, a corresponding reduction should be effected in the preferences enjoyed by the Delagoa Bay route in terms of the "Modus Vivendi."
- 19. The resolutions of the Conference dealing with adjusted tariffs were given effect to on the 1st September last, but the Conference resolution to reduce the Delagoa Bay preference referred to in the foregoing paragraph has not yet been brought into force.
- 20. Rough (Imported) Timber, in through traffic, was in September last placed in a lower classification than obtained previously, which approximately gave a reduction of 15s. per ton to stations within the competitive areas of the Central South African Railways.
- 21. The Rates in Local Traffic for Minerals, other than Coal, were reduced from 1d. to approximately 3/4d. per ton per mile for distances beyond 82 miles, from 1st September, 1906.

KLERKSDORP-FOURTEEN STREAMS RAILWAY.

- 22. On the 17th May the Klerksdorp-Fourteen Streams Railway (144 miles) was opened for public traffic. In connection with that opening the rates from Capetown to Klerksdorp and intermediate stations to Johannesburg were reduced, as were also the rates of freight from Port Elizabeth and East London to Klerksdorp, Potchefstroom, and certain other stations on the Klerksdorp-Johannesburg Line.
- 23. The effect of these reductions was that the advantage in the rates possessed by Natal for many years was converted into a distinct disadvantage, notwithstanding that Durban is much nearer by rail than any of the Cape Ports. Strong representations were made by this Administration against the introduction of the new rates from the Cape Ports without any corresponding alteration in the Natal Tariff, but up to the present time, without result.

WESTERN TRANSVAAL TRADE.

24. The trade of the Western Transvaal is generally served by the Cape route, owing to the low "In Transit" rates which operate from Ports to stations on the Cape Railways adjacent to the Transvaal Border. Representations have been, and are still being made, in order to have the Natal route placed on equal terms in competing for this trade with its competitors.

BETHLEHEM-KROONSTAD RAILWAY RATES.

- 25. The extension of our system into the Orange River Colony by the opening of the Bethlehem-Kroonstad Railway (88½ miles) placed our route in a better position to compete for a legitimate proportion of the trade of that Colony.
- 26. This connection shortens the distance by railway from Durban to the principal centres of the Orange River Colony south of Kroonstad by 182 miles, as compared with the Charlestown route.

- 27. By the opening of the Bethlehem-Modderpoort Railway which it is expected will be ready for traffic in May of this year, further areas for the extension of Natal's trade will be opened.
- 28. In its agreement with the High Commissioner, Natal's traffic is entitled to the most favoured rates operating in the Orange River Colony, and as a result the rates from Durban to Kroonstad and Intermediate stations between Smaldeel and Viljoens Drift shew an advantage over the corresponding rates from Cape Ports. In order to preserve its trade, the Cape Administration granted rebates equivalent to the difference between the rates from Durban and East London respectively. In terms of our Agreement, the Central South African Railways met these rebates by the application of countervailing rates. The case for the respective Colonies was referred to the High Commissioner, who decided, as a temporary measure, that for the period of one year, the rates from East London and Durban should be equalised at Smaldeel and Modderpoort respectively. For the purpose of adjusting the rates in the area of each Administration's sphere of trade influence, and to settle details generally in respect thereto, a Conference of the General Managers of the Central South African Railways, Cape and Natal Administrations met at Bloemfontein on the 1st December, and as a result of their deliberations a revised tariff was brought into operation on the 17th December.

CHEAP EXCURSION FARES TO SOUTH COAST LINE.

- 29. Every endeavour has been made to popularise the Sea-side Resorts on the South Coast Line by the introduction of specially low fares. Financially the effort has not so far been rewarded, although there has been a fair increase in the number of passengers visiting the South Coast.
- 30. Three exceptional factors had to be contended with during the year, viz., the continued heavy depression of trade, the native rebellion, and the prevalence of malaria. These causes undoubtedly operated against a successful comparison with tickets issued at the ordinary excursion fares in 1905. It is proposed to repeat the experiment again this year, with a slightly higher rate of fare.

Miles Open and Under Construction during the Year.

31. The total mileage worked by the Natal Government Railways at the end of the year was 1,023½. The details of the mileage opened during the year are as follows:—

a. Natal-Cape Line—		Mileage.	Opened for Traffic.
Donnybrook to Creighton		$15\frac{1}{4}$	May 16th, 1906.
b. Upper Tugela Railway—			
Ennersdale to Los Kop		134	June 1st, 1906.
c. Bethlehem-Kroonstad Railway-		001	7
Bethlehem to Kroonstad Junction	•••	$88\frac{1}{2}$	June 21st, 1906.
Total	• • •	117	

- 32. The last mentioned extension was built by the Natal Government under agreement with the High Commissioner of South Africa, and was opened for public traffic within 13 months from the time of commencing construction operations. This line has already considerably increased Natal's trade to the Orange River Colony.
 - 33. The lines under construction at the end of the year were as follows:-

		Gauge.		Miles.
* Alfred County Line		3∮ ft.		6}
* Upper Tugela Line	•••	3½ ft.		104
* Weenen Line	• • •	2 ft.		283
† Stuartstown Line	• • •	2 ft.	•••	97
		Total		1 // 3
		IUlai		143

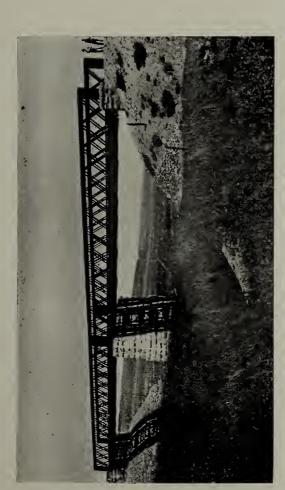

* Departmental construction.
† Being built by Contractors, who will, under Agreement, work same for a period of two years after completion.

ORANGE RIVER COLONY BRANCH, BETHLEHEM STATION.

ORANGE RIVER COLONY BRANCH, LINDLEY ROAD STATION.

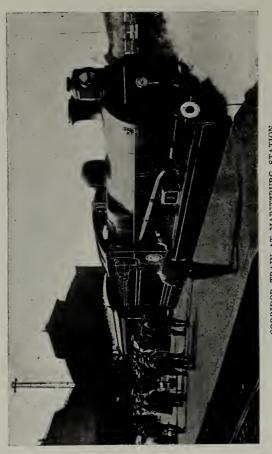

ORANGE RIVER COLONY BRANCH, VALSCH RIVER BRIDGE.

ORANGE RIVER COLONY BRANCH AT 3163 MILES.

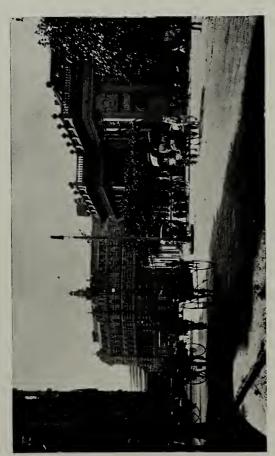

CORRIDOR TRAIN AT MARITZBURG STATION.

RAILWAY OFFICES AND POST OFFICE, GARDINER STREET, DURBAN.

- 34. Alfred County Railway (Standard Gauge).—Considerable progress had been made in the construction of the Bridge over the Umzimkulu River at the end of the year. Platelaying operations will be carried out on the embankments and cuttings already executed on the completion of the bridge to run the rails and sleepers forward. The line will temporarily terminate at the beach, a distance of $6\frac{1}{2}$ miles from North Shepstone.
- 35. The whole of this extension can presumably be looked upon only as an instalment, as under existing conditions it will open up no new country, and will not pay the cost of working or interest. Its termination on the Beach, six miles south of North Shepstone, is, from a business point of view, peculiarly indefensible.
- 36. Upper Tugela Railway (Standard Gauge).—The section from Los Kop to Winterton is well in hand, and will, it is expected, be ready for traffic early in May next, when 103/4 miles will have been added to the present line, making a total of 24 miles.
- 37. Weenen Railway (2 st. Gauge).—At the end of the year the rails had reached Weenen. There was then, however, a considerable mileage to be ballasted. Owing to the tick fever restrictions upon the movement of ox wagon transport, a goods service was inaugurated on the 4th October by construction train to Halfway House, a distance of 18 miles from Estcourt. This preliminary service has since been extended to Weenen. The two engines imported for the line are giving satisfaction, and it is expected that the goods and other rolling stock will meet requirements. A limited number of this design was obtained so that any necessary improvements may be made when constructing additional plant. The line will be opened for passenger and goods traffic in April, 1907.
- 38. Stuartstown Railway (2 ft. Gauge).—Construction work is now in full operation. Before the end of the year several consignments of permanent way material had arrived in the Colony. The earthworks at the south end of the line will shortly be in a position to receive the rails.
- 39. Natal-Cape Line (Standard Gauge).—Work for the present has been stopped at Creighton, 95 miles from Pietermaritzburg. It is expected negotiations with the Cape Government will shortly have advanced sufficiently to enable the work to be continued from Creighton to Riverside. Under the proposed agreement Natal will build the 3 8 miles from the Border at the River Umzimkulu to Riverside, and work the line from that point to Llewellyn.

PROPOSED NEW LINES.

- 40. Vryheid-Parijs Extension, $37\frac{1}{2}$ Miles.—During the year a Bill was authorised by Parliament for the extension (on the standard gauge) of the line from Vryheid to Hlobane and Parijs. Hlobane is situated at $17\frac{1}{2}$ miles on the new line, and is the centre of extensive coal beds. Parijs, the terminus of the extension, is $37\frac{1}{2}$ miles from Vryheid, where iron ore deposits will be worked. The line is to be built by Government for Mr. G. H. Bonas, under guarantee by the Government of $3\frac{1}{2}$ per cent. per annum upon the capital cost of the line, not exceeding £240,000. The profits and losses in working are to be shared by the Government and owner. The agreement continues for a period of 25 years, and is subject to (a) the supply to Government of coal for locomotive purposes at 5s. per ton, and (b) the development of iron and steel works at a cost of not less than £200,000.
- 41. Ingagane-Utrecht Extension, 29 Miles.—Parliamentary sanction was given to the construction of this extension (on the standard gauge) by the Utrecht Collieries, Ltd., without any Government interest guarantee on the capital cost. At the time of writing this report no actual construction operations had been commenced.

Principal New Works Completed or in Progress during the Year.

- 42. Enlargement of Iron Foundry, Locomotive Workshops, Durban.—This work has been completed and the result is that an increase in output of castings equal to 48 per cent. is now possible.
- 43. New Stores Building, Durban.—On the 23rd August this building was completed, and handed over to the Stores Department. It meets to a considerable extent, the long felt demand for improved accommodation, and renders it possible to more securely and satisfactorily store the class of articles consumed not only by the Railway Department, but also by other Government Departments. It has thus assisted in the inauguration of the Stores Amalgamation Scheme.
- 44. Passenger Accommodation, Ladysmith.—As a temporary step pending the provision of permanent Station buildings, improved waiting room accommodation and other facilities for both the European and Coloured passengers have been provided. The work carried out has removed a long standing source of public complaint.

 REDUCTION OF GRADES AND CURVES.
- 45. South Coast Junction to Bellair (2½ miles).—This work was still incomplete at the end of the year, although by that date the earthworks had been prepared for the reception of the permanent way, which at the time of writing this report is being placed in position. The deviation will give a grade of 1 in 50, and replace the present excessive curvature by an easy one of 1,000 degrees. It is proposed to make use of the existing line for down traffic, and so give the distinct advantage of a double line between South Coast Junction and Bellair.
- 46. Hill Crest to Padleys (1¼ miles).—The deviated line was brought into use on the 9th December, and is a decided success. A load of 425 tons is now taken by down trains, or an increase of 32 per cent., and an unbroken load may consequently be worked from Botha's Hill to Durban.
- 47. Umsindusi and Thornville Junction Deviation (4 miles).—This deviation was opened for traffic on the 8th July, and ensures a continuous maximum load of 390 tons by up trains over the Cato Ridge and Maritzburg section, or an increase of 32 per cent. upon the former load.
- 48. Estcourt and Ladysmith Down Grade Improvements (33/4 miles).—Deviations at or about 157, 158 and 159 miles, were brought into use on 17th June, 22nd July, and 4th November, respectively. At the end of the year there still remained two further deviations to be completed, namely, at 158 and 167 miles, the former of which has now been brought into use. The policy of constructing deviations is entirely a sound one, and should be continued, even in spite of temporary financial depression.

 STRENGTHENING OF MAIN LINE.

49. As part of the urgently necessary improvements to the Main Line, which, however, do not affect the grades and curves, the work of increasing the number of sleepers per rail length, providing an improved fish plate, and replacing the present cast iron chair by a steel one on the guard railed portions, has been commenced, and will result in very considerable future economy in maintenance, while providing a better running road for the locomotives and rolling stock. A sum of £20,000 was authorised for this important work in the current Supply Bill,

and further sums will be asked for annually until the whole is overtaken.

50. On the passing of the Supply Bill Indents were transmitted to the Agent General for 12 miles of 60 lb. type of materials, 7 miles of which are to be laid

STRENGTHENING OF NORTH AND SOUTH COAST LINES.

BRIDGE OVER UMSINDUSI RIVER ON DEVIATION.

UMSINDUSI DEVIATION.

NEW UMSINDUSI STATION.

OVERHEAD ROAD BRIDGE, UNSINDUSI DEVIATION

down on the South Coast Line, and the remaining 5 on the North Coast Line. At the end of the year only 3½ miles of relaying work had been overtaken, but it is now well in hand and will be fully completed at an early date. There will then remain only other 3 miles to complete the section from South Coast Junction to North Shepstone. The improvement of the Line already effected, has resulted in an increased speed on the branch. All that can be done in this direction will tend to further popularise this Line, and develop the tourist and holiday traffic.

SIGNALLING.

51. It has been decided to continue the installation of modern signalling appliances at the principal Stations, a work initiated in the year 1900. During the past year an extension of the interlocking signalling was completed at Durban, with a resultant saving in wages which should speedily cover the capital cost involved. This financial year, Pietermaritzburg Station Yard and Malvern Station will be installed with modern signalling arrangements, and at the former Station a considerable annual saving will be effected by the withdrawal of pointsmen. It is intended to ask for an annual vote on account of signalling until the whole system is fully equipped.

New Works Contemplated.

- 52. Ladysmith Yard and O.R.C. Junction Station.—Although a sum of £5,000 was provided in the current Supply Bill it has not been possible to make a commencement with the work of re-modelling the Locomotive and Traffic arrangements at Ladysmith. Plans are, however, under consideration with the object of treating the work sectionally, and restricting the expenditure to the immediate requirements. It is imperative that financial provision should be made to cover this long delayed and increasingly necessary work.
- 53. Main Line Improvements.—In the next financial year it is proposed to improve the grades on the Estcourt-Ladysmith Section, which preclude down trains from conveying the full load applicable to a 1 in 50 grade. In view of the preponderance of the coal conveyed coastwards over the up traffic, the energies of the Department will be devoted to the improvement of the grades to down trains, and the section Dargle Road to Hilton Road falls to be undertaken as soon as financial provision is made. Improvements are being carried out where the gain in load is of such a nature that a distinct reduction in working expenses will be effected.
- 54. Tarpaulin Shed, Durban.—This shed, constructed of inflammable material, is situated adjacent to buildings containing stores of considerable value; and in the estimates provision has therefore been made for its removal to Greyville. Two fires, originating in this shed, had to be dealt with during the year.
- 55. Smiths' Shop Extension, Durban.—It is very desirable that this long deferred work should be put in hand, as not only is it necessary in order to assist the operations of other sections of the Locomotive Department, but considerable sums now involved in importing forgings would be spent in the Colony, and enable large quantities of scrap material to be worked up locally. A sum is therefore being placed on the Supply Bill to provide for this work.
- 56. Locomotive Depots.—At a number of the up-country centres the Locomotive Shedding and Coaling facilities require considerable improvement. A sum is being included in the new Supply Bill to overtake the most urgent portion of the work, and thus enable a reduction to be effected in the present haulage of locomotive coal.
- 57. Water Supplies.—A scheme is proposed for the supply of water on the Biggarsberg in order to obviate the present haulage of water from Dundee to Glencoe Junction, and generally improve our watering arrangements at a part of the line which has given trouble from time to time, and especially since the development of the Main Line traffic.

58. The filtering of the water used by the Locomotive Department at a number of the up-country Stations requires attention, and as a first step, an experiment is being made at Sunday River. Should it prove successful, similar action will be taken at the other Watering Stations where the condition of the water is detrimental to the Engines during the rainy season.

Engines and Rolling Stock.

- 59. The capital expenditure on Engines and Rolling Stock amounted to £41,080, making a total expenditure up to the 31st December, 1906, of £3,417,729.
- 60. Engines.—No new engines were obtained during the past year. It is, however, desirable to obtain five additional 6-wheeled coupled Tender Engines of the type now successfully working the Mail Trains between Ladysmith and Charlestown.
- 61. The Locomotive Superintendent has designed a modified type of the 8-wheeled coupled Tender Engine for working the upper section of the Main Line where the curves generally do not exceed 500 degrees radius. The design of this engine provides for a deep firebox, which, it is anticipated, will give considerable economy in coal consumption, and will also ensure a longer life to the boiler. Two of these will be placed on order as early as possible.
- 62. Repairs to Locomotives.—During the year 235 locomotives passed through the Repair Shop, or an increase of 45 as compared with the previous year. Considerable progress has been made in bringing an increased number of locomotives into a state of efficiency. The increasing train mileage (145,795 miles in excess of the year 1905) necessitated continuous and heavy expenditure on this work.
- 63. Coaching Stock.—The following passenger vehicles constructed in the Workshops were placed on traffic:—

Five 1st and 2nd class compo. lavatory corridor carriages. Four 2nd class lavatory corridor carriages. One 1st class carriage, non-lavatory. One 1st and 2nd class carriage, non-lavatory. One 2nd class carriage, non-lavatory.

Two 2nd class and guards compo., non-lavatory.

At the end of the year the following stock was in course of construction:—

One 1st class corridor carriage. Four suburban coaches.

The latter are of the same type as those now in service, which have proved to be well suited for the traffic for which they were designed.

- 64. Cattle Wagons.—In the middle of the year a commencement was made with the construction of 25 Cattle Trucks, and at the end of December, twelve had been placed on traffic. The completion of these vehicles will enable a corresponding number of steel wagons, hitherto set aside for live stock, to be released for coal and general traffic.
- 65. Insulated Vehicles.—Seven 8-wheeled bogie Insulated Vans for the conveyance of meat and other perishable goods were completed and placed on traffic, as well as two dairy vans.
- 66. Conversion of Low-Sided to High-Sided Vehicles.—The conversion of 25 low-sided to high-sided wagons was authorised in the month of October, and forms the first instalment of 200 wagons of the 22-ton capacity stock to be converted in this manner to enable a full load of 22 tons of coal to be carried instead of 16 tons, the average they are at present capable of taking. It is also proposed to similarly alter a number of the 35-ton capacity low-sided vehicles in view of the increasing demands of the coal trade upon our wagon stock, and the present excess of low-sided vehicles over the requirements of the timber and rail traffic.

- 67. New Stock.—Owing to the shrinkage of traffic receipts the original intention of constructing 25 additional 35-ton capacity wagons departmentally was not carried out, but the money voted by Parliament will, as far as possible, be utilised in improving the carrying capacity of the existing stock.
- 68. It is hoped that the completion of the coaling appliances on the Bluff will considerably assist the Railway Department by the quick release of loads, as under existing arrangements a very large amount of rolling stock is tied up for storage purposes at the Port.
- 69. Rebuilds.—At the end of the year a total decrease in the value of engines and rolling stock as compared with the original capital expenditure had taken place to the extent of £90,707. This sum is the value of stock worn out and broken up in past years. It is desirable that action should be taken to make good the wastage by rebuilds as a charge to revenue, and the work, for financial reasons, must be spread over a period of years. In the new Supply Bill a sum of £20,000 is asked for the purpose. The expenditure will be confined to those classes of stock which are most urgently required for traffic work. The alternative to building fresh stock is the writing down of the capital.
- 70. Building of Corridor Stock for the Central South African Railways Administration.— There are now being constructed in the Shops on behalf of the C.S.A.R. Administration the first instalment of 24 Corridor Vehicles composed of 4 Dining Cars, 12 first class and 8 second class carriages. This work will keep the construction section of the Carriage Shops fully occupied for at least eighteen months, and while the assistance thus being rendered to the sister Administration will be of value to it, the Natal Railway Department will be able to retain in its employment a larger number of artisans than would have been necessary for its own requirements. The practical completion for the present of the Department's programme of carriage building has made it possible to undertake the new work.

DINING CARS.

71. With the opening of the extension between Bethlehem and Kroonstad in the Orange River Colony, a service of Dining Cars was introduced between the latter point and Van Reenen with considerable advantage to the travelling public.

European Staff.

72. Number of.—There has been no relaxation of the policy of retrenchment which became necessary three years ago, but the increased mileage open and increased number of train miles run, together with additional repair work necessary in the Locomotive Shops, have not rendered possible any marked decrease in the numbers, which at the end of December during the past three years were as follows:—

1906. 1905. 1904. 1,782 4,789 4,848

- 73. Volunteers at Native Rebellion.—During the Native Rebellion, February-August, 1906, no less than 7 per cent. of the European Staff were called upon to proceed to the scene of operations as representatives of either Volunteer or Reserve bodies. Credit is also due to those officers who, having remained at their Railway posts, were obliged to undertake more onerous duties.
- 74. Classification of Salaried Staff.—New scales of salaries have been brought into operation since 1st July, 1906, to govern the Administrative and Executive Staffs of all Branches of the Service, and these have been supplemented by a

scheme of classification to include all salaried Officers. It is hoped that a common incremental date will be practicable as from 1st July next, which will considerably simplify the salaried question.

- 75. Obituary.—During the year the Department has been bereaved of many old and faithful Officers.
- 76. The much regretted death of Mr. Leonard Brereton, Maintenance Engineer, who for twenty years had been associated with the Railway System, occurred at Maritzburg on 21st August last. His position has been filled by the appointment of Mr. G. R. Holgate, who for 16 years has been associated with the Construction Department, and at the time of his transfer was completing the construction of the Kroonstad Extension in the Orange River Colony.
- 77. Mr. George Guillod, Clerk of Works, Durban, died on 30th September, 1906, after 18 years service. In view of the necessity of retrenchment and the small amount of new work now in hand or likely to be placed in the immediate future, the duties of Clerk of Works have been merged with those of the District Engineer, who for the better supervision of his District and more efficient control of his work generally was placed with Headquarters at Durban on the 1st December, 1906.
- 78. In the Locomotive Department, the service suffered loss in the death of Mr. G. Leverett, Foreman Carriage Builder, who for 25 years had been associated with the Department. The vacancy was filled by adding the duties of Carriage Foreman to those of the Saw Mill Foreman.
- 79. Mr. W. BIRD, Locomotive Inspector, died on the 11th May, 1906, after 26 years useful service. The re-arrangement of Districts has rendered the appointment of a successor to Mr. BIRD unnecessary.
- 80. The Maintenance Department lost through death the services of Permanent Way Inspector W. H. Bevis, who had been in the service for 27 years, and also Mr. J. H. Goldborne, who had been with the Department for six years, and was Chief Bookkeeper in the Maintenance Department.
- 81. The Department lost one of its oldest servants in the death of Mr. J. Gordge, of the Stores Department, he having entered the service on 20th January, 1880.
- 82. Messrs. J. Morgan and J. Smith, Station Masters at Krantz Kloof and Bothas Hill, have also been removed by death after a very creditable career in the Railway Service extending to 17 and 21 years, respectively.

Labour Supply.

- 83. The policy, which obtained for many years, of engaging coloured labour through the medium of contractors has been modified, the Department now recruiting its own Native labour. This system gives better control at a considerably reduced cost.
- 84. The amendments to the Indian Immigration Laws have proved advantageous to the Department, as more Free Indians have come forward for work, and a larger number of men have been taken on under re-indenture. The indentured men taken over during the year have replaced more highly paid Free Indians or Natives, and thus brought about a considerable saving in expenditure.
- 85. During the year 1,087 Free Indians have been taken on, and 1,217 left the service; 555 Indentured Indians have been taken over; 232 have completed their indenture, and of the latter 91 were re-indentured.
- 86. Sixty-eight Indentured men have deserted, and of these 41 were arrested. The remainder have not yet been recovered. Fifty-nine Indentured Indians were returned to India as being unfit for further service.

INDIAN AND NATIVE STAFF.

87. The following is the total number of Indians and Natives employed in the Department as on the 31st December, 1906:—

Class.	Traffic.	Maint.	Loco.	Stores.	Labour.	Total.
Indentured Indians Free Indians Natives	 661 680 611 1,952	355 810 2,168 3,333	255 411 811 1,477	101 52 150 303	92 15 9	1,464 1,968 3,749 7,181

88. The population of Barracks at the chief Stations at the end of the year was as under:—

Place	•		Men.	Women.	Children.	Natives.
Durban and Point		 	1,024	380	478	607
Pietermaritzburg		 	204	89	113	311
Ladysmith		 	155	54	73	103
Newcastle		 	30	11	17	25

Free Passes.

- 89. The number of Free Annual Season Tickets issued to other branches of the Public Service during the year totalled 415, in addition to 347 Complimentary and Parliamentary Inter-Railway Passes issued by the several South African Railway Administrations and available over the Natal Government Railways.
- 90. A small beginning has been made by the reduction of the number of Free Annual Passes issued for 1907, but a great deal still remains to be done in this direction if matters are to be put on a proper footing, and the present heavy loss of revenue to the Department avoided.

General.

- 91. Secretary to General Manager.—On the 1st March, 1906, Mr. Hedley Salmon was transferred from the position of District Agent at Johannesburg to that of Secretary in the General Manager's Office, thus filling the vacancy created by the retirement of the Assistant General Manager, (Mr. J. M. Hunter), who left the Department by resignation on the 31st March, 1906, after 16 years' service.
- 92. Traffic Supervision.—On the 1st September the control of the Traffic staff and operating arrangements generally was placed under the direct charge of a Traffic Superintendent, the duties being taken up by Mr. D. B. Downie, who up till then had filled the position of Assistant Traffic Manager attached to my Office. The expansion of the system and the development of traffic has justified the creation of a distinct Department as is common on other Railway Systems, and was only departed from in Natal at a time when the system and traffic working were of much smaller proportions than they are to-day.
- 93. The commercial side of the traffic working, including Rates and Claims, continues to be directly attached to the Head Office.
- 94. Railway Police.—In accordance with the terms of the Supply Bill, the cost of the Police set aside for the use of the Railway Department was taken to debit as a charge to Railway Working as from the 1st July last. It was found on

investigation by the Railway Department that the force was in excess of the requirements. It was accordingly largely reduced in numbers, and an economy effected of £5,039 per annum. The case is a very good example of the economy to the Colony resulting from the strict allocation of expenses to the Department properly liable for them. The principle could with equal success be applied in the converse direction, and the Railway Department credited with the cost of many services now rendered free—when it is probable that the demand for those services would disappear or at any rate be largely modified.

- 95. Amalgamation of Government Electrical Departments.—On the 1st August the control of the Electrical installations of the Harbour Department was taken over by the Electrical Engineer of the Railway Department, which places all of the Government Electrical Departments under one authority.
- 96. The scheme for the supply of energy for the Port requirements from the Railway Central Power Station, Durban, has during the year been pressed forward. Contracts were entered into for the supply of materials and the carrying out of important sections of the work. It is expected that the main portion of the scheme will be completed early in this year.
- 97. Amalgamation of Government Stores Departments.—On the 1st July the amalgamation of the Government Stores Departments of the Colony was carried out, the section under the Railway Department taking over the whole of the duties. Considerable economy will be realised in supervision as well as by the standardising as far as possible of stores used in the various branches of the Government service.
- 98. Washaways and Slips.—During the latter part of the year, exceptionally heavy rains fell, and while the traffic on the Main Line suffered no interruption, several washaways and slips occurred on the newer Branch Lines. In October the Umzinto Branch was blocked as the result of a severe storm causing a total suspension of traffic for three days.
- 99. On the Natal-Cape Line several interruptions were experienced in the Umkomaas Valley and at the 90 miles Post. These may be attributed to the heavy nature of the earthworks on this Branch, and the fact that the past was the first severe rainy season since the line was opened for traffic.
- 100. Coal Contracts.—On the 1st July new contracts for the supply of Locomotive and other coal for, in the majority of cases a period of two years, and in others an option to extend the 12 months' contract to that time, were entered into. The prices being paid are on the average 14 per cent. in excess of the late contracts. Coal is being drawn from all the principal collieries in the Colony.
- 101. During the last two years the following quantities of coal were obtained under Departmental Contracts, and distributed as shewn below:—

		1906.	1905.	Increase.
		Tons.	Tons.	Tons.
Railway Department		227,660	208,798	18,862
Harbour Department	•••	33,041	27,256	5,785
Navy Coal		619	173	446
		261,320	236,227	25,093

- a passenger, a Basuto Transport Driver, who overbalanced himself whilst riding on a truck on a troop special.
- 103. General Managers' Annual Conference.—From 1st to 6th November, 1906, the Annual Conference of General Managers of South African Railways was held at Capetown. In addition to discussing various subjects of mutual interest, the interchange of views on other Railway matters, and the communication of results

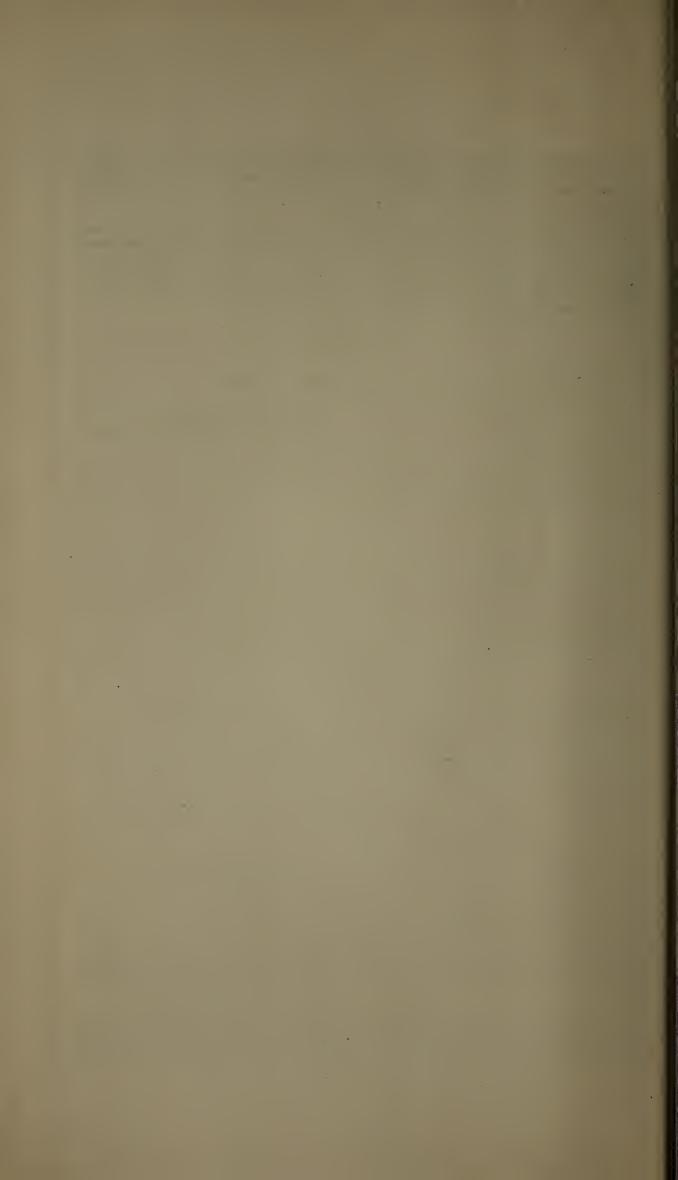

of experimental working in several Departments, the whole of the recommendations of the Traffic and Accounting Officers' Conference held at Durban in September were finally dealt with.

CONCLUSION.

ro4. In conclusion I have special pleasure in testifying to the loyal help and assistance I have received from all the officers controlling the various departments of the Railway Administration under my charge and from the staff generally. Such cordial assistance and co-operation, coming from those to whom I was a complete stranger, and at a time when I had only just taken over charge from my distinguished predecessor, was doubly welcome and valuable.

I have the honour to be,
Sir,
Your obedient Servant,

EDWARD R. ROSS, General Manager.

APPENDIX A.]

MAINTENANCE DEPARTMENT.

REPORT OF THE ENGINEER-IN-CHIEF FOR THE YEAR ENDING 31st DECEMBER, 1906.

THE GENERAL MANAGER OF RAILWAYS,-

I have the honour to submit my Annual Report on the Maintenance Department for the year ending 31st December, 1906.

1. The total length of Railway open for Traffic and maintained by this Department on the 31st December was 1,023½ miles, viz.:—

MAIN LINE— Durban to Transvaal Border				307‡	miles.
POINT LINE— Durban to Point				13	"
North Coast Line— Durban to Verulam				191	,,
Verulam to Tugela (Natal-Zululand R Tugela to Somkele (Zululand Railway				50 [*] 98	" "
South Coast Junction to North Shepst	,			724	"
BLUFF LINE— Clairmont to Wests				63	"
UMZINTO BRANCH— Alexandra Junction to Umzinto				61	"
RICHMOND BRANCH— Thornville Junction to Richmond				17	"
GREYTOWN BRANCH— Pietermaritzburg to Greytown				643	"
NATAL-CAPE BRANCH— Pietermaritzburg to Creighton				95	"
UPPER TUGELA BRANCH— Ennersdale to Los Kop	•••	•••		3 <u>1</u>	
ORANGE RIVER COLONY BRANCH—	D	••	•••		,,
Orange River Colony Junction to Van Van Reenen to Bethlehem (Worked for Bethlehem to Kroonstad)	•••	35 <u>}</u> 88 <u>}</u> 88 <i>}</i>	"
DUNDEE-VRYHEID BRANCH—		•••	•••		"
Glencoe Junction to Vryheid	motal N	···	•••	594	,,
	Total N	meage		1,023½	

- 2. The third section of the Natal-Cape Branch from Donnybrook to Creighton a distance of 154 miles was opened for general traffic on the 16th May, 1906.
- 3. The first section of the Upper Tugela Branch from Ennersdale to Los Kop a distance of 13\frac{1}{4} miles was opened for general traffic on the 1st June, 1906.
- 4. Under agreement with the C.S.A.R. the Natal Government Railways constructed the Bethlehem-Kroonstad Branch, and the line was opened for general traffic on the 21st June, 1906.

MAIN LINE IMPROVEMENTS.

5. During the year ending the 31st December, 1906, £66,577 was spent on the work of reducing Grades and Curves on the Main Line.

The following shews the position of the works at 31st December :-

Deviation Thornville Junction, Pietermaritzburg.—The first section, Umsindusi and Maritzburg was opened for Traffic on the 8th July. miles in length, between

Deviation South Coast Junction, Sea View, Bellair.—This deviation, 21/2 miles in length, is practically completed.

Deviation Hill Crest, Padleys .-- This deviation, 11/2 miles in length, was opened for Traffic on the 9th December.

Deviations at 158, 160, and 167 miles, Main Line.—These deviations, 3¾ miles in length, were opened in sections, as follows:—

From 157 miles to 158, Heavitree Station, opened 17th June, 1906.

From 158 miles to 158½, opened 22nd July, 1906.

From 158½ miles to 159¾, opened 4th November, 1906.

RELAYING.

6. The following relaying work has been completed during the year:—

- 7. Owing to an epidemic of Malarial Fever at the beginning of the year the relaying work on the North Coast Line had to be entirely stopped and the gangs dispersed.
- 8. Seven miles of 60 lb. type material are on order for the South Coast Branch, and five miles for the North Coast, and it is anticipated that the whole of this material will be placed in the road this financial year. This will only leave 3 miles of 45 lb. rails on the South Coast which have yet to be relaid.

A statement is appended in this Report, giving the mileage laid with different types of Permanent Way.

WATER SUPPLIES AND WATERING ARRANGEMENTS.

- 9. Owing to the financial position, very little expenditure was incurred during the year.
- 10. At Gillitts a new 50,000 gallon tank was completed, and the old 15,000 gallon tank was taken down and re-erected in Durban Yard.
- 11. At Hatting Spruit a Well was sunk down 25 ft. near the old bore hole. The experiment has been a success as there has been an ample supply for Locomotive purposes during the past dry season.

LANDSLIPS AND WASHAWAYS, 1906.

12. Very little trouble occurred in the early part of the year from Slips and Washaways, but on the opening of the wet season, towards the end of September, considerable delay was caused by Slips on the Natal-Cape Line. Stormy weather with torrential rains prevailed until the end of the year, and on the South Coast Line especially, the Permanent Way suffered severely. On September 20th a slight Slip was reported at 46 miles Natal-Cape Line, and on the 22nd similar trouble occurred at 72 miles on the same Branch. On 15th October owing to an abnormal storm in the Equeefa District, the South Coast Line at Alexandra Junction and the Umzinto Branch were completely blocked and through traffic on the South Coast was not resumed until the 19th, the Branch Liue being cleared on the 22nd. The north approach to the resumed until the 19th, the Branch Liue being cleared on the 22nd. The north approach to the Bridge at Alexandra Junction was washed away for a distance of 300 ft., but fortunately no damage was done to the structure. The Umzinto Branch was more or less damaged up to 4834 miles; the Permanent Way being shifted in places from the formation, and at other spots entirely blocked by heavy boulders. It was only by the energetic steps taken by the Maintenance Officers to cope with the work of restoration that the Line was made passible within so short a time. On 16th October the Line was breached in places between Umfolosi and Somkele in Zululand, but no great damage was done and through traffic was early resumed. On 6th November washaways occurred on the Greytown Branch between 101½ and 103½ miles, the damage being heaviest at 102½ and 103 miles. At the latter mileage the formation was completely washed away for 6 rail lenths, and the Ballast Train was kept running two days to fill up the gap. In order to keep traffic moving the road was slewed over and sleeper cribbing fill up the gap. In order to keep traffic moving the road was slewed over and sleeper cribbing built up to support the rails, with the result that a minimum of delay resulted. During the same month (November) further slips and washaways were reported on the Natal-Cape Line at $7\frac{3}{4}$, $11\frac{1}{2}$, 13, $46\frac{3}{4}$ and $84\frac{1}{4}$ miles, but no serious delay to the train service resulted. Further trouble was experienced on the same Branch during December, owing to the continued rain causing Slips at $43\frac{1}{4}$, $52\frac{3}{4}$, 68, $69\frac{1}{2}$ and $92\frac{1}{2}$ miles. The Slip at $52\frac{3}{4}$ miles was extensive and the

Line was not opened for through traffic until 6th January, 1907. I regret to report, however, that on latter date a further Slip has occurred at 90 miles which from its appearance threatens to become a serious one. The expenditure incurred in connection with Slips and Washaways during 1906 amounted to £1,625.

SIGNALLING ARRANGEMENTS.

- 13. The construction of a new signal installation in Durban Yard has been carried out, which has centralized the whole of the working of the points and signals. This work was hitherto done by one large cabin, from which the Signals were worked and three smaller cabins from which the adjoining Points were worked.
- 14. With this new installation these small cabins were done away with and a Mechanical Interlocking Frame of 68 levers was erected in a central cabin. In these levers there are 26 working points and 39 working signals, the arrangement being laid down as nearly as possible to those in use on the Home Railways, and by the addition of other Signals has effected a saving of expense in the working of the yard.
- 15. Extensive arrangements are now in hand for the complete signalling of the Main and adjoining lines in Maritzburg Yard.
- 16. The signalling arrangements at various stations which have been carried out during the past three years have been found to work satisfactorily in the regulation of traffic.

PHOTOGRAPHIC DEPARTMENT, 1906.

17. The Photographic Section has carried out useful work for the various Departments of the Service. Nearly 4,000 photographs and photographic enlargements have been issued for advertising purposes. These have been supplied chiefly for public buildings and offices, the adornment of railway carriages, guide books, poster boards and the South African Exhibition.

RAILWAY NURSERIES, INCHANGA.

18. The following figures indicate the number of trees, shrubs, &c., despatched from the Nurseries since 1901:—

	1,289.
1007	1,581.
190/	3,591.
1905	7,852. 15,000.
1906	58,822.

- 19. It will be seen that the work done during 1906 is nearly four times greater than during the previous record year 1905. Trees (forest, fruit and ornamental) flowering shrubs, and plants, creepers, vines and verandah plants comprise what has been sent out to meet the applications received from the Staff.
- 20. The 50,000 hardwood trees, planted as an experiment on the 17 acres of ground adjoining the Nurseries, are doing well.
- 21. During the year, seed of the Oc. Viride and Oc. Grattisuma were planted, and the young plants will be ready for distribution in January, 1907. These plants, if possessing the merits attributed to them, will be of great benefit to Malaria infected districts as the trees are stated to drive the mosquitoes away.
 - 22. The Department is indebted to many friends for contributions to the Nurseries.

ADDITIONS TO STATIONS AND BUILDINGS.

23. The following are some of the principal works carried out during the year :-

Point.—Sidings for Federal Cold Storage Co.

Durban.—Building for reception of Sponge Cloth Machinery erected. Ventilation of Workshops improved. Old Locomotive Paint Shop converted into Electric Office and Workshops. Extension of 11 and 12 Sidings completed. Extension of Siding to Union Street. Improving North Coast Starting Signals. 15,000 gallon Tank, Gillitts, re-erected in Durban Yard. Extension of sidings for corridor carriages. Verandah for Hydraulic Press. Blacksmith's Shop improved ventilation, verandah provided to protect dross coal.

Berea Road.—Sidings at 14 miles for Colonial Oil Co. reconstructed.

Congella.—Drainage of Station Yard completed.

South Coast Junction.—Alterations to Sidings.

Hillarys.—Goods Shed and Siding provided.

Bowkers.—New Platform provided. This platform is 325 ft. long, and built with hollow concrete blocks as an experiment, completed on 25th October, 1906.

Bothas Hill.—Dwarf Lever provided.

Umsindusi.—Improvements to watering arrangements.

Pietermaritzburg.—Runaway Siding extended. Alterations to Parcels Office completed.

Hilton Road.—Extension of Office for Postal Department.

Balgowan.—Additional accommodation Staff Quarters.

Rosetta.—Station Buildings replaced after having been destroyed by fire.

Mooi River.—Erection of additional quarters.

Harts Hill.—Siding provided.

Ladysmith.—Improving Station Buildings, Station Yard Sidings relaid. District Store improved.

Hatting Spruit.—Alterations to Goods Loading Bank. New Well satisfactorily completed.

Alcocks Spruit.—Erection of Goods Shed, Siding to Goods Shed completed.

Newcastle.—Water Column at upper end of yard provided.

Ingogo.—Iron pipe line substituted for hose pipe.

O. R. C. BRANCH.

Aberfeldy.—Improvement to Water Supply and 1,000 gallon tank erected.

Harrismith to Bethlehem.—Road between 20 and 50 miles ballasted and improved. Six sets of Native Barracks provided.

Bethlehem.—Improvements to engine shed completed. Additional office accommodation provided. Water supply connected to town water main. Ladies' waiting room completed.

NORTH COAST RAILWAY.

Greyville.—Fencing north end of yard completed. Alterations to Coal Stage completed. Sewerage from barracks connected to Corporation Scheme.

Umgeni.—Clarkson & Bentley's Siding completed.

Greenwood Park.—European Shelter provided.

Verulam.—Indian Barracks removed to more healthy site.

211 Miles .- Siding provided for Messrs. Johnstone & Bate.

53 Miles.—Siding for Colonel Addison provided.

Ginginhlovu.—Additional siding accommodation provided.

South Coast Line.

Umlaas Siding .- Alterations to Sidings.

Isipingo.—Dead-end Siding extended.

Lower Umkomaas.—Extension of siding for engine, Engine Pit completed.

RICHMOND BRANCH.

Nels Rust.—Station Buildings and Quarters for Station Master erected.

Richmond.—Culverts enlarged.

NATAL-CAPE LINE.

Deepdale.—Latrine provided for coloured passengers. Rest House erected.

GREYTOWN BRANCH.

86 Miles.—New stopping place, "Notuli," provided.

Dalton.—Extension of Von Bulow's Siding.

STATEMENT OF NEW WORKS CARRIED OUT BY OR UNDER THE SUPERVISION OF THE MAINTENANCE DEPARTMENT DURING 1906.

24. The following figures shew the amount of new work carried out by or under the supervision of the Maintenance Department during 1906:—

Relaying and Remodelling Y	ards					£714
Improving Branch Lines						9,714
New Buildings	•••			•••	•••	842

Charlestown Locomotive Yar	ds, Shed	s, &c.	•••	•••	•••	Nil
				Total	•••	£104,925

COST OF MAINTENANCE.

- 25. The expenditure has been kept down in every possible direction compatible with the safety of the Line, and it will be seen from the statements enclosed, that, notwithstanding the heavy rolling stock now running over these lines and the taking over of new Branch Lines which always cause an increase of expenditure during the first rainy season, the Maintenance Expenditure per Open Mile is the lowest since the year 1899.
- 26. To shew the extraordinary difficulty in maintaining the severe sections of the Main Line, such as between Pinetown and Gillitts, it may be stated that it has been costing at the rate of approximately £300 per Open Mile annually over and above the ordinary up-keep of the Line. This abnormal expenditure has been due to the wear of rails on the curves, necessitating frequent changes of rails, and to the breakage of the cast iron guard rail chairs.
- 27. This heavy expenditure is being overcome by the substitution of steel in place of cast iron chairs, and replacing the 45 lb. type guard rails by 78 lb. second hand rails released from the Main Line. 27,200 steel guard rail chairs or nearly 50 per cent. of the total have already been placed in the road with excellent results. The chairs have been in the road for over 12 months with practically no breakages, whilst the cast iron guard chairs have been breaking at the rate of 29 per cent. per annum.
- 28. When relaying the Main Line with 78 lb. rails and cast iron guard chairs was commenced in 1896, the heaviest Locomotive weighed 45 tons and the heaviest srucks 34 tons gross, whereas Tender Engines (tender included) weighing 105 tons and trucks weighing 50 tons gross are now in daily use.

MAINTENANCE OF BRANCH LINES—REDUCTION OF EXPENDITURE.

ZULULAND LINE.

29. In order to keep down expenditure the "Flying Gang" system was introduced on the Ginginhlovu-Somkele Section, a distance of 78 miles on the 7th September. Up to that date the section was supervised by 7 Platelayers, each Platelayer having 10 Natives. Under the "Flying Gang" system two Platelayers with 16 Natives each will work from each end of the section until they meet, and they will then work their way back. These Platelayers will be assisted by a relieving Platelayer with a gang of 12 Natives, who will have Ginginhlovu as their head quarters. If the experiment is a success the estimated annual saving will be £1,134. The section chosen for the experiment is a very suitable one as there is only a tri-weekly train service, and the gradients and curves are comparatively light.

SOUTH COAST LINE.

30. Owing to the progress made in relaying this Branch with 60 lb. type material, it has been possible to increase the Platelayers' lengths to 9 miles, thus releasing 6 Platelayers and 15 Natives at an annual estimated saving of £1,485,

NORTH COAST LINE.

31. This line being in good condition and a further commencement having been made with relaying with 60 lb. material, it has been possible to increase the Platelayers lengths to 6 miles, thus releasing 2 Platelayers and 28 Natives at an estimated saving of £1,104 per annum.

VRYHEID BRANCH.

32. The earthworks on this Branch Line having become consolidated and the train service being small, it has been possible to release 3 Platelayers and 24 Natives at an estimated saving of £1,116 per annum.

GREYTOWN BRANCH.

33. The earthworks, &c. on this Branch having become consolidated, it has been possible to reduce the number of Platelayers by 3 at an estimated annual saving of ₹504.

NATAL-CAPE BRANCH.

34. Owing to the earthworks having become consolidated and to the small train service, 4 Platelayers and 16 Natives have been released at an estimated saving of £1,028 per annum.

RICHMOND BRANCH.

35. Owing to the good condition of this Line it has been found possible to release one Platelayer and 5 Natives at an annual saving of £315.

SUMMARY.

Railway.	Platelayers released.	Natives and Indians dispensed with.	Estimated Annual Saving.
Zululand Line North Coast Line South Coast Line Vryheid Branch Greytown Branch Natal-Cape Line Richmond Branch	 5 2 6 3 3 4	11 28 15 24 16 5	£1,134 1,104 1,485 1,116 504 1,028 315
Totals	 24	99	£6,666

36. The Platelayers so released have been utilised in filling up vacancies caused by deaths, resignations, &c., and in manning the Bethlehem-Kroonstad Branch. If these Platelayers had not been available it would have been necessary to have taken on new men.

STAFF.

The Maintenance Staff at 31st December, consisted of the following:-

Europeans Indians Natives	 	···	1906. 530 1,226 1,759	 1905. 478 967 1,384
•	Total		3,515	 2,829

The increase is due to increased mileage opened for traffic.

For the year 1905 it was my pleasing duty to record that there had not been a single death or serious injury, amongst the European Maintenance Staff, but for 1906, I exceedingly regret having to report the deaths of the following members:—

Mr. Leonard Brereton, Maintenance Engineer, died on 21st August, 1906, at the age of 50. He was first employed on the Natal Railways under Messrs. Perry & Co. in 1882 on the construction of the line between Pietermaritzburg and Ladysmith. In 1894 he was appointed Maintenance Engineer, and he held this position up to the time of his death.

Mr. George Guillod, Clerk of Works, Durban, died on 30th September at the age of 61. He joined the service on 1st October, 1888 as Draughtsman, and was promoted Clerk of Works, Durban, on 1st January, 1890, which position he held until his death.

Mr. John H. Golbourne, Maintenance Bookkeeper, Pietermaritzburg, died on 7th November at the age of 38 years. Joined the Department as Bookkeeper on Reconstruction on 8th June, 1900,

Mr. William H. Bevis, Permanent Way Inspector, Pietermaritzburg, died on 12th November, 1906 at the age of 59. He joined the service on 1st June, 1879, as Platelayer, and was promoted Inspector on 1st April, 1883.

Mr. Hugh McGlinn, Foreman Platelayer, died on 18th October, 1906, after having been in the service since May, 1903.

Mr. E. E. Norman, Carpenter, who had been in the service of the Department at Durban for a number of years, died 16th December, 1906.

GOOD SERVICE RENDERED BY THE STAFF.

I wish to place on record my appreciation of the good services rendered by the Staff of all grades, during the year.

CERTIFICATE RESPECTING PERMANENT WAY WORKS AND BUILDINGS.

I hereby certify that the whole of the Permanent Way, Bridges, and Culverts on the Main and Branch Lines were during the year 1906 maintained in good working order and repair, and that the buildings were kept in as good a condition as the reduced Votes would permit.

RENEWALS.

BALLAST RENEWALS.

The quantity of New Ballast supplied between January and end of June, 1906 was 7,856 cubic yards. Contracts were let for the supply of 2,500 cubic yards for Renewals for the financial year 1906-7, of which quantity 1,500 yards have been supplied to end of December, 1906.

Ballast is also being broken by Rebel Prisoners at three quarries. The quantity broken to end of December being 5,300 cubic yards, making a total of 14,656 cubic yards for Renewals for the year.

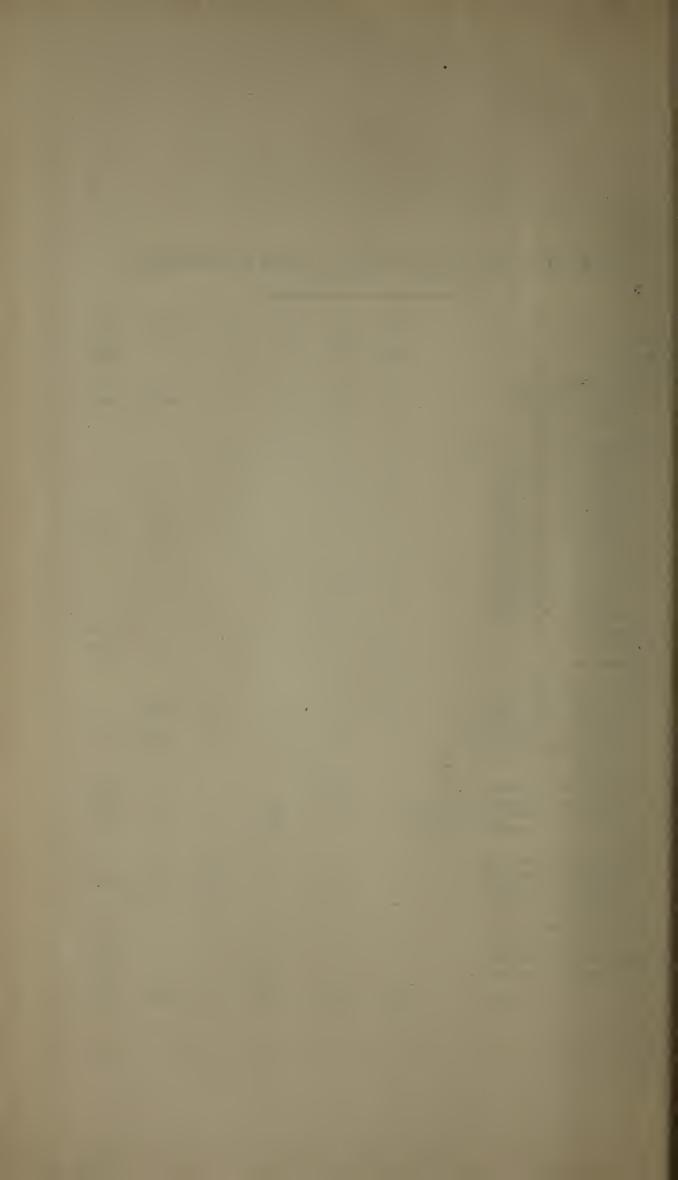

JOHN W. SHORES, Engineer-in-Chief.

APPENDIX B.]

SURVEYS AND CONSTRUCTION DEPARTMENT.

REPORT OF THE ENGINEER-IN-CHIEF FOR THE YEAR ENDED 31st DECEMBER, 1906.

GENERAL MANAGER,-

I have the honour to submit a Report on the Survey and Construction Department for the Year ended 31st December, 1906.

- 2. The various Surveys and Works have been under the direction of Mr. W. H. Cobley, Superintendent Engineer of the Surveys and Construction Department, with the following Engineers and Surveyors in charge:—
 - Mr. A. J. HUMBY, Main Line Improvements and Stuartstown Railway.
 - Mr. G. R. HOLGATE, Resident Engineer, Bethlehem-Kroonstad Railway, transferred to Maintenance Department 1/10/06.
 - Mr. D. E. P. HEAD, Natal-Cape Railway and Upper Tugela Railway.
 - Mr. W. L. GRANTHAM, Upper Tugela Railway (resigned 17/12/06).
 - Mr. G. S. COAKES, Dronk Vlei-Riverside, Main Line Improvements and Hlobane Railway Surveys (resigned Feb., 1907).
 - Mr. J. FERGUSON, Weenen 2 ft. Gauge Railway.
 - Mr. A. R. MACKENZIE, Stuartstown Railway (resigned 31/1/07).
 - Mr. C. G. BATEMAN, Alfred County Railway.
 - Mr. W. H. SHARPE, Head Office Staff.

SURVEYS.

MAIN LINE IMPROVEMENTS.

Pinetown to Gilletts.

3. A Report shewing how a 1 in 50 compensated Line, including the difficult section near Fields Hill, was submitted under date of 5/3/06. (E.C.R. 859/06).

Ladysmith-Estcourt.

4. Various minor improvements which may be required to take the full load up a 1 in 50 compensated grade have been reported on under date of 14/1/07. (E.C.R. 859/06).

Lidgetton-Hilton Road.

- 5. Surveys have been carried out for a 1 in 50 compensated grade.
- 6. The Estimates for improving the grade against "Up" traffic have been kept separate from those for "Down" traffic, and a detailed Report was sent in on 2/2/07. (E.C.R. 142/07).

Dronk Vlei-Riverside Surveys.

7. Further Surveys have been carried out and eventually it was decided that the Combination Route was to be adopted crossing the Ingwagwane River at a point 8.2 miles from Creighton Station and 3.8 miles below Riverside making a total distance from Creighton Station to the Terminus of 12 miles.

Hlobane Railway Surveys.

- 8. The Hlobane Railway Act was promulgated on 21st December, 1906.
- 9. A Survey Party proceeded to Vryheid to make preliminary investigations with a view to deciding on the route to be finally adopted.

Expenditure on Surveys.

10. The sum of £1,765 18s. 10d. has been expended under the Survey Vote during the year ended 31st December, 1906, and of this amount £17 5s. 8d. has been reimbursed to Revenue from Loan Funds.

CONSTRUCTION.

Natal-Cape Railway, 107 Miles.

11. The Third Section of this Line from Donnybrook (80 miles) to Creighton (95 miles) was opened for Public Traffic on the 16th May, 1906.

Expenditure.

12. The total expenditure on this Line to 31st December, 1906, was £791,790 15s. 2d., of which £20,372 5s. was spent during the year 1906.

13. No actual construction work has yet taken place beyond Creighton pending the prolonged discussion that is taking place between the Cape and Natal Governments.

Upper Tugela Railway, 40 Miles.

- 14. The First Section, Ennersdale to Los Kop, 131 miles, was opened for public traffic on 1st June, 1906.
- 15. The Line, which is laid with new 60 type rails of the British Standard Section, 6-hole Angle Fish Plates, Plate Chairs, Creosoted Sleepers, and first class broken stone ballast, has a maximum grade of 1 in 50 compensated with minimum curves of about 700 ft. radius, over which a maximum speed of 30 miles per hour is authorised.
- 16. Instructions were received in February, 1906, to start work on the Second Section, Los Kop to Springfield (11 miles), and work was immediately put in hand under the Departmental System.
- 17. This Section also has a maximum grade of 1 in 50 compensated and minimum curves of 700 ft. radius.
- 18. The Earthworks have been comparatively light, but the Masonry work has been somewhat heavy. Platelaying and Ballasting.
- 19. The rails, which are the same as those used on the First Section, began to arrive in the Colony in October, about 9 months after the order was given for them.
- 20. Prices for the Linking-in, &c., were duly called for and the rails reached Springfield Station about the middle of January; and the ballasting is in hand.

Fencing.

- 21. The Fencing Material has all been received, and a start has been made with the erection of it. Loco. Water Supplies.
- 22. A Hand Pump and six 400-gallon Tanks are arranged for at the Irrigation Furrow, Springfield. Stations.
 - 23. The following Station accommodation is being provided:— NOODHULP STOPPING PLACE (say 213/2 miles)—Shelter, wood and iron.
 - WINTERTON (TERMINUS).—Station Building (wood and iron) consisting of General Office, 14 ft. x 25 ft.; General Waiting Room, 10 ft. x 14 ft.; Lavatory and W.C., with verandah on three sides; Engine Shed, Goods Shed (wood and iron), with the rails laid right through; Native Shelter, Lamp Room, European and Native Latrines; Station Master's House, (brick); Platelayer's Cottage, married type (brick); and two sets of Indian Barracks, one for Traffic and one for Maintenance, 2 and 5 rooms respectively.
- 24. The material for the above Buildings has been ordered, and the erection will be carried out under the Departmental System. Expenditure.

25. The total Expenditure on this Line to 31st December, 1906, is:

£69,878 15 5 £28,625 0 11 First Section Second Section

ALFRED COUNTY RAILWAY, 61/2 MILES.

FIRST SECTION—NORTH SHEPSTONE TO SOUTH SHEPSTONE STATION, 2 MILES.

Umzimkulu Bridge.

- 26. The tender of Messrs. Guy & Holbrook for the erection of this Bridge, which consists of 17 Spans of 60 ft. and one span of 25 feet, and for those on Section No. 2, was accepted on 2nd April, 1906.
- 27. The temporary Bridge consisting of timber piles with rail decking was completed by about the end of June.
- 28. The permanent Cast Iron Screw Piles were screwed in place by the end of September, and at the end of the year nearly the whole of the iron-work was in place.
- 29. On the 4th May, instructions were received that the Umzimkulu Bridge should be converted into a combined Road and Railway Bridge.
- 30. The Earthworks in the wagon road approaches and the concrete in Culvert are well in hand, and reinforced concrete slabs have been ordered from Messrs. J. Wright & Sons, South Coast Junction, for the flooring of this bridge.

Platelaying and Ballasting.

31. The permanent way consists of new 60 lb. rails of the British Standard Section, 6-hole angle fish plates, plate chairs and creosoted sleepers.

32. The platelaying and ballasting from the junction of existing Line to the Umzimkulu Bridge was carried out by Day Labour.

Stations.

33. The following Stations have been arranged for, but the final details have not yet been agreed upon :-

Existing temporary North Shepstone Station to be abandoned.
St. Faith's Road Stopping Place to be called North Shepstone Stopping Place. Siding accommodation to be provided.

South Wharf Stopping Place with sidings and facilities for dealing with river borne traffic.

South Shepstone Station—for general traffic.

Beach (temporary Terminus).

Second Section—South Shepstone Station (2 Miles) to Beach Terminus (6½ Miles).

- 34. The Earthworks and Concrete Work on this Section have been carried out Departmentally and were practically finished by the end of March, 1906.
- 35. In November, instructions were received that the rails were not to be laid beyond South Shepstone Station, but in January of this year (1907) we were instructed to have them linked-in as far as the Beach Terminus.

Expenditure.

- 36. The Estimate of the Section from North to South Shepstone including the Umzimkulu Bridge, a distance of 2.3 miles, was £41,770.
- 37. The Estimate from the South Shepstone Station to the Beach Terminus (4.1 miles) was £20,630.
 - 38. The total Expenditure on this Railway to 31st December, 1906, was £51,802 17s. 7d.

Proposed Extension from Beach Terminus to Marburg Commonage.

- 39. In accordance with instructions received at the end of March a trial survey was made from the Beach Terminus to Marburg Commonage, and a route with maximum grade of 3°/o compensated with minimum curves of 400 ft. radius, giving a distance of 3.6 miles was obtained.
- 40. The approximate Estimate is £14,900 exclusive of a Terminal Station and Sidings, the cost of which is included in the Estimate to the Beach Terminus, and would be transferred to Marburg.
 - 41. No instructions have up to date been received to proceed with this Extension.

Weenen 2 Ft. Gauge Railway (281/4 Miles).

42. Prices for Earthworks and Masonry on the second Section, 17½ miles to Weenen, were received and accepted in January, 1906, and the work, which was done under the Departmental System, was practically completed at the end of June, excepting the heavy work at the Tiger Kloof.

Rolling Stock.

- 43. The two Engines, which are six-wheeled coupled Tank Engines, six low-sided pressed steel wagons, two cattle trucks, and two Covered Goods Trucks were received in April, 1906.
- 44. Two First and Second Class Compo. Carriages, two Third Class Carriages, and two Brake Vans were received about the middle of October, 1906.
- 45. Owing to the six low-sided wagons being insufficient for Construction purposes, the two Cattle Trucks were converted into temporary low-sided wagons. Six wooden Trucks were afterwards made, and the bogies from the carriages were placed under the same, making in all 14 low-sided trucks.
- 46. The Engines and low-sided Trucks have so far worked satisfactorily. Loads behind these engines of from 70 to 80 tons have been hauled up the 3°/o grades.

Platelaying and Ballasting.

- 47. The permanent way material consists of 35 lb. steel rails, six-hole Fish Plates, Plate Chairs, and Creosoted Sleepers, 5 ft. 6 in. by 8 in. by 4 in. The ballast consists of part first class broken stone and part of a more temporary nature.
- 48. The Linking-in was started about the end of May and the Sidings in the temporary Depôt at Estcourt were put in and the rails laid as far as the Little Bushman's River Bridge where the Linking-in was stopped some considerable time during the erection of the Bridge.
- 49. The rails reached Half-Way House in August when it was thought advisable to stop Linking-in and get some of the ballasting done.
- 50. Owing to the outbreak of East Coast Fever it was arranged to work Goods Traffic between Estcourt and Half-Way House, and a start was made with such traffic on October 4th.

- 51. Considerable delay to the Construction Work was caused owing to the limited amount of Engine Power and Rolling Stock available.
- 52. The Linking-in was re-started on 29th October, 1906, and the rails reached Weenen Terminus on December 11th.
- 53. The maintenance of the Line between Estcourt and Half-Way House (18 miles) under the Construction Department commenced on January 1st, 1907.
 - 54. The Ballasting between Half-Way House and Weenen is well in hand.

Bridges.

55. The following is a list of Bridges:-

LITTLE BUSHMANS RIVER BRIDGE.—4 spans of 40 ft., second-hand Lattice Girders from Coast Lines with Masonry Piers and Abutments.

OATES SPRUIT BRIDGE.—One 40 ft span, second-hand Lattice Girders from Coast Lines with Masonry Piers and Abutments.

INYANDU SPRUIT BRIDGE.—Two 40 ft. spans, second-hand Lattice Girders from Coast Lines with Masonry Piers and Abutments.

AMANZIMYANA SPRUIT DRIDGE.—Two 40 ft. spans, second-hand Lattice Girders from Coast Lines with Masonry Piers and Abutments.

TIGER KLOOF.—One 15 ft. arch.

Stations.

56. The undermentioned Stations have been arranged for :-

ESTCOURT.—The Weenen Line commences in the Station Road opposite the existing Passenger Station which will be utilised for the accommodation of Passengers. A Goods and Transfer Siding has been laid to serve the existing Goods Platform. A transhipping platform has been laid alongside the Standard Gauge Siding over which a wood and iron shed will be built. Double-road Engine Shed, Turntable, Coaling Platform, Platelayer's House (wood and iron, married type), and Indian Barracks (3 rooms, wood and iron) have been erected.

SCHEEPERS STOPPING PLACE (43/4 miles).—Shelter (wood and iron).

PENISTON STOPPING PLACE (61/2 miles).—Shelter (wood and iron). Double Dead End Siding.

HAVILAND STOPPING PLACE (10 miles).—Shelter (wood and iron), Double Dead End Siding, Platelayers' Cottage, Indian Barracks.

OATLANDS STOPPING PLACE (1434 miles).—Shelter (wood and iron), Double Dead End Siding, Platelayer's Cottage, Indian Barracks.

HALF-WAY HOUSE (171/2 miles).—Shelter, Double Dead End Siding.

MONA (24 miles).—Shelter, Double Dead End Siding, Platelayer's Cottage (single), Indian Barracks.

NEW FURROW (271/4 miles).—Shelter, Double Dead End Siding.

WEENEN TERMINUS (2834 miles).—Station Building (wood and iron) consisting of Booking and Telegraph Office, Ladies' Waiting Room, &c. Goods Shed (30 ft. x 20 ft.), Goods Platform, 260 ft.; Station Master's House (brick), Platelayer's Cottage (married, wood and iron), Staff Quarters consisting of 4 bedrooms, dining room, kitchen and pantry; Indian Barracks (3 rooms), European and Native Latrines, Triangle, Engine Shed (Single Line).

Fencing.

57. Considerable difficulty has been experienced in regard to keeping Cattle from getting out of the fenced-in Paddocks by means of Cattle Guards, and the question of fencing the Line, either as a whole or in part is still under consideration.

Water Supplies.

58. The following Water Supplies have been arranged:

ESTCOURT.-Gravitation Supply with Water Column from Main Line Supply.

DEEP KLOOF.—Hand Pump from Dam with concrete wall.

AMANZIMYANA.-Hand Pump from Well alongside the Spruit.

WEENEN TERMINUS .- Gravitation Supply from New Furrow.

Expenditure.

- 59. The original detailed Estimate was £117,000 including Rolling Stock. This was afterwards reduced to £90,000.
 - 60. The Expenditure to the 31st December, 1906, was £81,574 12s. 1d.

Opening to Weenen.

61. The opening to Weenen which has been considerably delayed by the working of Goods Traffic between Estcourt and Half-Way House and the extraordinary heavy rains, is expected to take place in April, 1907. In the meantime it has been arranged to work Goods Traffic over the whole of the Line, by direction of Government, as a result of the further restrictions which have had to be imposed by reason of the spread of East Coast Fever.

STUARTSTOWN RAILWAY.

Esperanza to Donnybrook.

- 62. The name of the firm to whom the Lump Sum Contract of £292,500 was let under date of 29th November, 1905, has been changed from Messrs. Pauling & Co. to the Transvaal Engineering and Contracting Co.
- 63. This Lump Sum Contract includes the Surveys, Construction, Equipment and working of the Line for a period of two years after final completion.
- 64. The final surveys carried out by the Contractors have been submitted from time to time for approval and the survey of the final section was only received on 8th February, 1907; and the total mileage from Esperanza to the Junction with the Natal-Cape Line near Donnybrook is about 97 miles.
- 65. The maximum grade allowed under the Conditions of Contract is 3°/o compensated, or 1 in 33, with minimum curves of 175 ft. radius in special cases.
- 66. The designs of the works generally, including Rolling Stock, are based on those of the Weenen Railway which has been carried out by this Department.

Earthworks and Masonry.

- 67. An actual start was made with the Earthworks on the Western Section between Donnybrook and Kununata on 24th May, 1906, and on the Eastern Section, Esperanza to Kununata, on 13th June, 1906.
- 68. The Earthworks as a rule are somewhat heavy, but the nature of the material is fairly easy.
 - 69. The Masonry both for Bridges and Culverts is generally speaking extremely light.
- 70. At the end of January, 1907, about 45 miles of Earthworks and about 23 miles of Masonry had been carried out.

Platelaying and Ballasting.

- 71. About 70 miles of Permanent Way Material has been received, most of which has been stacked at the Esperanza end, the balance being stacked at the Donnybrook end.
- 72. The rails are 35 lb. to the yard, the same type as those on the Weenen Line, and manufactured in Germany.
- 73. The sleepers are the same size as those on the Weenen Railway, namely, 5 ft. 6 ins. by 8 ins. by 4 ins., but are of D'jatti Wood from the Dutch East Indies.
- 74. In the Equeefa Valley on 15th October, 1906, considerable damage was done on the Eastern Section owing to the extraordinary rain-fall that took place on that date, when it is estimated that over six inches fell within an hour in that Valley.

Junction at Donnybrook.

75. It was decided on 16th October, 1906, that the Contractors should lay a third rail from Donnybrook Station along the Natal-Cape Line to a point where the Stuartstown Line diverges therefrom, a distance of 2.59 miles, in connection with which the Contractors were to allow the sum of £1,000 per mile, or say £2,590.

Stations.

76. The details of the Stations and Stopping Places have not yet been decided upon.

Expenditure.

- 77. The Estimate based on the Lump Sum Contract of £292,500, including Law and Land, cost of former Surveys, Supervision and Rolling Stock amounts to £310,000, or, say, £3,195 per mile for the 97 miles, including Rolling Stock.
- 78. The expenditure to the end of December was £19,667 0s. 8d. The Contractors only receive in cash $50^{\circ}/_{\circ}$ of the amount due, the balance being held over in terms of the Contract.

BETHLEHEM-KROONSTAD RAILWAY.

Platelaying and Ballasting.

- 79. The Linking-in, which was started at both ends, namely, Bethlehem and Kroonstad, was joined up on 15th February, 1906.
- 80. Immediately afterwards a certain amount of traffic was worked over the Line at the request of the Management. Inspection.
- 81. An Inspection was made on the 22nd, 23rd and 24th May, 1906, and the Line was opened for Public Traffic on the 21st June with restricted speed, pending the completion of the
- 82. The ballasting which is generally of a cheap and inferior nature with only a very small amount of broken stone, was practically completed in September.

Fencing.

83. This has been carried out with old metal sleepers obtained from the C.S.A.R. to be used as standards, and the erection was practically finished at the end of the year, very considerable delay having occurred in obtaining materials.

Loco. Water Supplies.

- 84. Considerable difficulty was experienced in connection with obtaining adequate Water Supplies without any great expenditure, and a number of bore holes were put down for testing purposes.
- 85. The following is a List of the supplies which were nearly completed at the end of the year:—
 - VALSCH RIVER.—Deep Well Steam Pump from Well near River to a 29,000 gallon tank; 6 in. Water Column, Pump House, and Rest House for Pumpman.
 - LINDLEY ROAD.—Deep Well Steam Pump from Well about ¼ mile on the Kroonstad side of the Station, Pump House and Pumpman's Cottage; 10,000 Gallon Tank, Water Column.
 - LOVAT.—Deep Weil Steam Pump from Well about 1/2 mile from the Line; 10,000 Gallon Tank, Water Column.
 - WONDERKOP.—Deep Well Steam Pump from Well about ¼ mile from the Line; Púmp House and Rest House for Pumpman; 29,000 Gallon Tank, Water Column.

Stations.

- 86. The following are the details of the Stations and Stopping Places which were practically completed at the end of the year:—
 - BETHLEHEM.—Platelayer's Cottage, Native Barracks, Loco. Inspector's House (stone), Loco. Inspector's Office (wood and iron), Loco. Store and Workshop, 3 sets of semi-detached Quarters, European and Native Latrines, Extension of Engine Shed, Engine Pits, Sidings.
 - MEETS STOPPING PLACE (7 miles).—Shelter (wood and iron), Name Board, Platelayer's Cottage, Native Barracks.
 - VALSCH RIVER (16½ miles).—Shelter (wood and iron), Name Board; Plateiayer's Cottage, Native Barracks, Loop Siding.
 - KAALLAAGTE STOPPING PLACE (22¼ miles).—Shelter, Name Board, Platelayer's Cottage, Native Barracks.
 - KAFFIR KOP STOPPING PLACE (28½ miles).—Shelter, Name Board, Platelayer's Cottage, Native Barracks, Double Dead End Siding.
 - LINDLEY ROAD STATION (36¾ miles.—Station Building, semi-detached Staff Quarters, Goods Shed (50 x 25 ft.); Goods Platform, 120 ft.; Cattle Pen, Permanent Way Inspector's House (stone), 2 Platelayers' Cottages, 2 Native Barracks (Maintenance), 1 Native Barracks (Traffic), Detached Quarters, Coal Stage, Ash Pit and Sidings.
 - KOMSPRUIT STOPPING PLACE (471/2 miles).—Shelter, Name Board, Platelayer's Cottage, Native Barracks.
 - LOVAT STATION (54% miles).—Station Building, semi-detached Quarters, Goods Shed, 50 ft. x 25 ft.; Goods Platform, 80 ft.; Cattle Pen, Loading Bank, 2 Platelayers' Houses, 2 Native Barracks (Maintenance), 1 Native Barracks (Traffic), Name Board and Sidings.
 - 00STHUYSEN STOPPING PLACE (631/4 miles).—Shelter, Name Board, Platelayer's Cottage, Native Barracks.
 - WONDERKOP (701/2 miles). Shelter, Name Board, Platelayer's Cottage, Native Barracks and Loop Siding.
 - COWIE STOPPING PLACE (77¾ miles).—Shelter, Name Board, 2 Piatelayers' Cottages, 2 Native Barracks. Double Dead End Siding.
 - KROONSTAD JUNCTION (88½ miles).—2 Name Boards, Platelayer's Cottage, Native Barracks and Loop Siding.

Telegraph.

- 87. This was erected by the C.S.A.R. with second-hand material supplied by that Administration.
- 88. The introduction by the C.S.A.R. of the Siemens & Halske Electrical Block and Lock System of Signalling with small disc signals at Kroonstad Junction came into operation on November 1st. By this arrangement the trains of the Bethlehem-Kroonstad Railway—which is treated as a Branch Line—are admitted to the Main Line of the C.S.A.R. on application by the Guards of the various trains to the Station Master at Kroonstad Station.

Expenditure.

- 89. The original detailed Estimate of £373,000, exclusive of Rolling Stock was reduced by the Government to £327,200.
 - 90. The total expenditure to 31st December, 1906, was £353,775, exclusive of Rolling Stock.

Rolling Stock.

91. The question of Rolling Stock is being arranged with the Managements of the C.S.A.R. and N.G.R. Administrations, and a number of C.S.A.R. Engines and Trucks are being taken over.

Engineer-in-Chief's Office, Pietermaritzburg, Natal, 14th February, 1907. JNO. W. SHORES, Engineer-in-Chief, N.G.R.

APPROPRIATION ACCOUNT FOR THE FINANCIAL YEAR ENDED 30TH JUNE, 1906.

VOTE E.

WORKS UNDER LOANS, RAILWAY CONSTRUCTION.

Account of the Sum Expended, compared with the Sum granted, in connection with Railway Construction in Natal, in the year ended 30th June, 1906, showing the Surplus or Deficit upon each Sub-Head of the Vote.

Explanation of the Causes of Variation between	Expenditure and Grant,	LOAN VOTE E, SUB-VOTES 1 AND 2.	1. This unexpended balance has been brought about by the fact that the Line has been temporarily stopped at Dronk Vlei pending the completion of negotiations with the Cape Government as to its extension to Riverside. 2. The bulk of this unexpended balance is due to the fact that no payments have yet been made to the Contractors for the Stuarstown Railway, and that the construction of the Howick Branch, which was provided for in the Estimates, has been held over for the present.	
Expenditure compared with Grant.	Less than granted. More than granted.	ε. s. d.	:	:

APPENDIX C.1

LOCOMOTIVE, CARRIAGE, AND WAGON DEPARTMENTS.

REPORT OF THE LOCOMOTIVE SUPERINTENDENT FOR THE YEAR ENDED 31ST DECEMBER, 1906.

THE GENERAL MANAGER OF RAILWAYS,-

I have the honour to submit my Report upon the Locomotive Department for the year ended 31st December, 1906.

MILEAGE.

1. Engine Mileage.—A considerably increased Engine Mileage has been run during the year 1906.

The total amounted to 6,007,472, or, an increase of 252,567 over that for 1905.

The average Mileage per Engine was 14,199, an increase of 447 over preceding year.

2. Train Mileage.—The total Train Miles run during the year 1906 was 4,628,953, or, an increase of 145,795 over that for the year 1905. The increased Mileage was attributable principally to the opening of the Bethlehem-Kroonstad and Ennersdale-Los Kop Branch Lines, as well as additional Main Line Mileage.

In addition to Mileage above noted, 93,893 Train Miles have been worked on Van Reenen-

Bethlehem Extension, which are not included in Train Mile Totals.

3. Summary of Mileage.—The following Summary of Engine and Train Mileage run during the years 1897 to 1906 inclusive, illustrates fluctuations in Mileage during that period:—

Year.	Average number of Engines.	Engine Miles.	Train Miles.	Average Train Miles per Engine.
1897 1898 1899 1900 1901 1902 1903 1904 1905 1906	117 125 129 149 174 228 259 296 326 326	5,198,149 5,480,981 6,105,233 5,426,659 5,754,905 6,007,472	2,424,152 2,762,429 2,750,955 3,119,409 4,348,609 4,450,557 4,851,600 4,292,028 4,483,158 4,628,953	20,719 22,099 21,325 20,936 24,992 19,519 18,732 14,500 13,752 14,199

4. Engine Performance.—A Comparative Statement (Annexure "A") of Mileage run by each Class of Engine in various Locomotive Districts during years 1905 and 1906 is submitted, from which some interesting figures may be taken, showing to what extent engines have been used upon various classes of trains during those periods.

5. Branch Line Mileage.—An additional Comparative Statement (Annexure "B") is also appended setting forth the Mileage performed upon Main and Branch Lines during years 1905 and 1906 under Locomotive Districts, which further illustrates upon what Sections of these Railways Mileage has been distributed.

EXPENDITURE.

6. It has again been found necessary to exercise the most rigid economy in expenditure in all sections of this Department during the past year, owing to continued financial depression in the Colony.

The total Expenditure upon Locomotives, Carriages, Wagons, and General Charges during 1906 has been further reduced to £619,814 4s. 8d., or a saving of £17,859 2s. 9d. upon that of

To further emphasize the effect of retrenchment in total expenditure during the past year, it will have been noted that 145,795 train miles have been run more than during 1905—in addition to the total saving of £17,859 in expenditure—which, represented in money value, and calculated upon the basis of 1905 working, would have equalled £20,739 or, an approximate total saving of £38,598 over preceding year's figures, 7. Work done for other Departments, etc.—The following Comparative tabulated Statement illustrates the value of additional work done by this Department for Capital Account, Workshops, and other Departments, which has been charged out during the years 1905 and 1906.

	Work.				1906.	1905.	Increase.	Decrease.
N XX					£	£ 44,441	£	£
New Works	•••	•••	•••		37,289		***	7,152
General Manager	•••	•••	•••	•••	552	671		119
Traffic	•••	•••			10,181	11,743	1	1,562
Chief Accountant		•••	•••		78	79		′ 1
Engineer-in-Chief		•••	•••		5,688	4,450	1,238	
Maintenance		•••	•••		459	513	l	54
Construction	•••	•••			2,699	8,218		5,519
General Stores		•••	•••		10,306	12,445		2,139
Government Cold Sto	orage	•••	•••		102	221	1	119
Other Government D	epartme	nts & C	utside F	irms	5,493	3,068	2,425	
C.S.A.R	·	•••			4,134	4,078	55	
Van Reenen-Bethleh	em	•••	•••		12,982	6,775	6,207	
		1	otals		89,963	96,702	9,926	16,665

It will therefore be seen that the total spending power of this Department during the past year has been equal to £709,777.

- 8. Comparative Statement (Annexure "C") of Expenditure in this Department for the years 1902 to 1906 inclusive is appended, in which the fullest details are set forth under their respective headings, computed upon a mileage basis, from which the position of this Department may be ascertained at a glance.
- 9. Running Expenses.—The expenditure under this heading has been reduced to 7.29d. per train mile, or a decrease of 0.44d. over that of the preceding year.
- 10. Coal.—New Contracts have been entered into as from 1st January, 1906, with practically all the outputting Collieries in Natal, at prices slightly in advance of those ruling previously. It has not been considered advisable to continue the use of the lower grade Coals referred to in report for 1905.

The total quantity of Coal used during 1906 was 197,346 tons at a cost of 4.51d. per train mile, as against 6.04d. during 1905.

11. Repairs to Engines.—The total expenditure upon Repairs and Renewals of Engines during 1906 was £186,383 or, an increase of £11,599 over preceding year.

The increase is mainly attributable to the fact that a greater amount of Repair Work has been effected upon the "Hendrie" and "Reid" classes of Engines during the year, as well as a larger proportion of general repairs.

- 12. Repairs to Carriages.—An amount of £61,041 was expended during 1906 upon Repairs and Renewals of Carriages as against £63,130 in 1905, thus shewing a reduction of £2,089 upon last year's total, or a reduced average of £5 ls. 1d. per vehicle over that of last year.
- 13. Repairs to Wagons.—The Expenditure upon Repairs and Renewals of Wagons during the past year amounted to £57,014 or an increase of £4,114 over that of 1905, and an average increase of £1 2s. 5d. per vehicle.

The increased Expenditure is explained by the fact that a larger proportion of our Wagon Stock has received attention during 1906 than hitherto.

14. Total Expenditure.—The following is a Summary of Total Expenditure in this Department during the years 1897 to 1906 inclusive, viz.:—

Year.	Supervision and Office Expenses	Locomotive.	Carriage.	Wagon.	Examination of Vehicles.	Total.
1897	7,005	152,577	21,705	48,046	£	229,333
1898	7,295	154,766	32,933	40,740		235,734
1899	6,881	168,388	34,171	46,302		255,742
1900	7,519	370,320	29,086	46,011		452,936
1901	13,402	399,798	39,657	57,789		510,646
1902	24,854	537,841	36,914	92,329		691,938
1903	33,258	602,260	55,835	120,645		811,998
1904	37,140	541,298	79,521	102,666		760,625
1905	21,238	465,214	63,130	52,900		637,673
1906	19,461	449,118	61,041	57,014		619,814

15. Summary of Expenditure.—The Total Working Expenditure, calculated upon a Mileage basis, and the percentage of Working Expenditure to Receipts during the same period has been as follows, viz.:—

Year.	Supervision.	I,ocomotive.	Carriage.	Wagou.	I¢xamination of Vehicles.	Total.	Percentage of Working Expenditure to Receipts.
1897 1898 1899 1900 1901 1902 1903 1904 1905 1906	d. 0.69 0.63 0.60 0.58 0.74 1.34 1.65 2.07 1.14	d. 15:10 13:45 14:69 28:49 22:06 29:00 29:79 30:27 24:91 23:29	d. 2:15 2:86 2:98 2:24 2:19 1:99 2:76 4:45 3:38 3:16	d. 4.76 3.54 4.04 3.54 3.19 4.98 5.97 5.74 2.83 2.96	d 1.88 1.72	d. 22:70 20:48 22:31 34:85 28:18 37:31 40:17 42:53 34:14 32:14	21·81 23·90 27·20 36·46 30·94 33·82 31·70 39·33 31·34 33·74

LOCOMOTIVES.

- 16. Locomotive Stock.—Particulars as to position and condition of Engine Power at 31st December, 1906, will be found tabulated in Annexure "D." Of the total of 333 engines, 158 were in first class order, 63 in second class order, 35 in third class order, whilst 45 were under repairs, and 32 waiting repairs.
- 17. Locomotives Erected and Repaired.—From information contained in Annexure "E. 1," it will be seen that considerable progress has been made during 1906 in Repairs of Engines. During last year 232 Engines passed through Durban workshops, as compared with 190 in the year 1905.
- 18. Engine Failures.—During the past year 246 Engine failures have been recorded, 205 of which were due to ordinary defects, and 41 were attributable to carelessness on the part of Staff. The following Statement tabulates details of failures:—

Class of Engine.		Passenger.	Mixed.	Goods.	Total.
Small Dubs Improved Dubs Reid Tender	 	4 1 5 3 15	 12 8 14 11	3 14 7 127 22	7 27 20 144 48
Total	•••	28	45	173	246

In view of the fact that each failure represented an average of 18,816 train miles, the result may be regarded as satisfactory.

19. Boiler Shop Repairs.—Appended will be found particulars of Repair and Renewal work upon Boilers and Engines of the various classes as follows:—

		1	Boilers 1	Repaired			Fran	epairs mes, s	to Cabs, moke		Fire :	Boxes			s of bes.	Boxes. -plate wed.	lers

Totals	54	23	3		43	146	32	182	301	251	7	14	52	54	14	1	3

In addition to above, 7 of the Reid and 3 of the Dubs "A" type of boilers have been repaired but not replaced in frames. The total number of boilers on hand and available for use was 8 Reids, 3 Dubs "A," 9 Dubs, 4 Kitson-Stephenson, and 1 N.G.R. type, making 25 in all. Of the 9 Dubs Boilers referred to, 4 are at present on loan to the Harbour Department.

20. Tender Engines. -- The working of Tender Engines during the past year has given satisfaction. They are now very extensively used upon Passenger Train Service.

CARRIAGES.

21. Carriage Stock.—A Summary of Coaching Stock on hand as at 31st December, 1906, will be found in accompanying Comparative Statement (Annexure "F").

During the year the following Carriage Stock has been placed on Traffic, viz.:-

5—Eight-wheeled 1st and 2nd Class lavatory corridor coaches.
4—Eight-wheeled 2nd Class lavatory corridor coaches.
1—Eight-wheeled 1st Class (non-lavatory).
1—Eight-wheeled 1st and 2nd Class carriage (non-lavatory).
1—Eight-wheeled 2nd Class carriage.
2—Eight-wheeled 2nd Class carriage with Guard's compartment.

These Carriages have been erected as a debit against Loan Vote.

During the same period 5 Cabooses have been returned from Construction Department, 2 Passenger Brake Vans were taken over from C.S.A.R. in connection with Bethlehem-Kroonstad Line, 2 Carriages were converted, 4 Brake Vans were broken up, and 5 Cabooses were sold, whilst 33 Carriages were under and awaiting repairs at 31st December, 1906.

22. Carriages Erected and Repaired.—A Comparative Statement (Annexure "E 2") is submitted, shewing particulars of Carriages erected and repaired during the years 1905 and 1906, from which it will be observed that close attention has been given to this stock during the past year.

WAGONS.

23. Wagon Stock.—The position of Wagon Stock as at 31st December, 1906, is summarised in Comparative Statement form (Annexure "D,") from which it will be seen that 68 wagons have been returned from Construction Department, 167 wagons have been erected, 3 conversions have been made, whilst 33 wagons have been broken up.

During the past year the following wagon stock has been placed on traffic, viz.:-

12—Eight-wheeled cattle trucks.
7—Eight-wheeled insulated vans.

2-Eight-wheeled dairy vans.

Total, 21

This stock has been erected and charged against Loans Vote.

24. Wagons and Vans Erected and Repaired.—Annexure "E 3" shews Comparative Summary of Wagons and Vans erected and repaired during the years 1905 and 1906, from which it will be observed that a larger number of wagons have received attention during 1906 than hitherto.

WORKSHOPS.

- 25. Smiths' Shop.—The additional accommodation reported upon last year has not yet been supplied, with the result that the Department has either to order Forgings from England, or buy locally, the latter of which are neither so well made nor so economical.
- 26. Foundry.--The extension to the Iron Foundry has been completed, and the increase of output since the completion has been 48 per cent.
- 27. Carriage and Wagon Yard.—We are still very short of accommodation for Wagon Repairs, and to get over the difficulty in the meantime, with the minimum expense, the wooden building known as the "temple" is now being removed, when additional sidings will be laid and the present sidings somewhat re-arranged, so as to accommodate probably from 30 to 40 wagons more.
- 28. Hot Water Boilers.—There have been erected during the year, for the use of the men, boilers for heating water for cooking purposes. This overcomes the objectionable practice of the men boiling water on wood fires all over the yard, which was a source of great danger.

DISTRICT STATIONS.

29. GREYVILLE: Engine Shed Accommodation.—The engine shed accommodation at Greyville is very limited and totally inadequate for requirements.

Coaling Facilities.—The recent addition to the coal stage has greatly facilitated the coaling and despatch of tender engines.

30. PIETERMARITZBURG: Shed Accommodation.—The shed accommodation at Pietermaritzburg is in most urgent need of duplication. Nearly one half of the locomotives stationed at this Depot remain unsheltered, and subject to all weather conditions, which has naturally a most detrimental effect upon the stock, and is not conducive to economical results.

Yard Accommodation.—The accommodation in yard also requires urgent extension, being inadequate for daily requirements.

31. LADYSMITH: Shed Accommodation.—The question of shed accommodation at Ladysmith is felt more acutely each succeeding year. The present sheds and yards are practically the same now as 20 years ago, despite the enormous increase in sizes and numbers of engines, as well as developments in traffic.

Although a scheme has been discussed for erection of a round-house engine shed to accommodate 78 engines, and remodelling the yard, nothing tangible has resulted.

I trust the disabilities experienced in this connection at Ladysmith may soon be removed.

Workshops.—Considerable difficulty is experienced through lack of accommodation in workshops, the present building being inadequate for requirements.

Coaling Facilities.—A great amount of duplication in work occurs daily through the primitive coaling facilities available at this station. The stages are unsuitable for rapid coaling of engines, and no covering has been supplied to protect the staff from climatic changes experienced.

Ladysmith: Water Supply.—Difficulty has been experienced during the past year with the Ladysmith Corporation water supply. The Department has at most times been unable to obtain a supply of water from the high pressure main sufficient for the purpose of cleaning out boilers, and in consequence we have been compelled to work our own pump night and day to avoid

A new agreement has been signed for the supply by the Corporation of a minimum of 150,000 gallons of water per day, of which at least 75,000 gallons per day shall be available from the high pressure service reservoir. A direct pipe line is to be put down by the Corporation, which should ensure the Department obtaining a certain high pressure supply of water.

Ladysmith: Water Filtering Plant.—It is anticipated that a "Kennicott" Water Softening and Filtering Plant will be shortly installed at Sundays River, to deal with water in the upper district, which, during certain seasons, gives much trouble.

Wallsend Water Supply.—I would urge the necessity of proceeding with this scheme immediately, in order to facilitate the working of engines on the Biggarsberg, and at same time materially reduce the cost of carrying water from Dundee.

32. CHARLESTOWN: Shed Accommodation.—The accommodation at Charlestown is insufficient for the number of engines stationed at this Depot. Further shedding accommodation is urgently required.

33. General Remarks.—It will be seen from the foregoing remarks concerning yard and shed accommodation at District Centres, that extensions are most imperatively and urgently required.

I regret that although this question has been raised in previous Annual Reports, as well as periodically through correspondence, relief has not yet been afforded.

COALING FACILITIES.

- 34. Mooi River.—More modern coaling arrangements are required at Mooi River. Over 200 tons of coal are dealt with daily by the bagging process, the cost of which might be considerably reduced by the introduction of better facilities.
- 35. Hatting Spruit and Newcastle.—The coal stages at these stations are too low, thus entailing a handling of coal and consequent delays. This work could be more expeditiously and extra handling of coal and consequent delays. economically overtaken with better facilities.

ELECTRICAL DEPARTMENT.

The following report has been submitted by Mr. F. W. MILLS, M.I.E.E., Chief Electrical Engineer, in connection with the working of this Section of the Department, viz:—

- I have the honour to submit herewith my report on the working of the various Electrical Power Stations during the year 1906.
 - 36. Charlestown.—The Plant at this station has worked well and given satisfaction. In December Mr. G. Stobie, late Electrical Engineer of the Harbour Department, was appointed District Electrical Engineer at this station.
 The output for 1906 was 84,249 B.T. units at an average cost of 3.283d. per unit as compared with 67,150 units at a cost of 5.667d. during 1905.
 37. Newcastle.—The electric current consumed at this station for lighting the yard by means of arc lamps is supplied by the local Electrical Supply Company, while the carboning, lamp maintenance, etc., is carried out by this Department.
 38. Dundee.—This station also obtains current from a local supply company which has given every satisfaction.
 39. Ladvemith.—The Plant at this station has run well and given as arranged trouble. The plant at this station has run well and given as arranged trouble.

satisfaction.
Ladysmith.—The Plant at this station has run well and given no unusual trouble. In view of the success with dross coal at other stations it was also introduced here with the effect, as will be noticed in the comparative statements, of substantially reducing the generating costs.
The station buildings have been completely rewired.
The total output was 136,804 B.T. units at an average cost of 2.729d. per unit as compared with 136,285 units, cost 3.22d. for 1905. The light and power cables in the yard are giving considerable trouble and it will be necessary to put down new ones early in 1907.
Mooi River.—The Plant at this station has worked well with the exception of a few slight failures during the early part of the year. Although the European staff has been considerably reduced the lighting and pumping has been carried out efficiently.

The total output was 38,517 B.T. units at an average cost of 3.673d. per unit as compared with 39,109 at a cost of 6.089d. for 1905.

41. Pietermaritzburg.—The Plant at this station has run throughout the year without a breakdown of any kind which is very creditable for a high tension power station. Some additions to the load were made during the year which are of advantage in assisting to keep down the works costs. The usual supervision to all Government installations was accorded and the wiring of the new

usual supervision to all Government installations was accorded and the wiring of the new Government Post Office supervised.

The total number of units generated was 319,436 at an average cost of 1.643d, per unit as compared with 289,177 in 1905 costing 1.988d, per unit.

42. Inchanga.—This Plant has worked well throughout the year. The plant is in good condition having lately undergone a thorough overhaul.

The total output was 35,999 units at an average cost of 2.135d, per unit as compared with 37.124 units costing 6.488d, for 1905. The difference in works costs is largely due to the fact that in 1905 additions made to the plant were charged to working expenses. There have been no additions during 1906. during 1906.

43. Hill Crest.—The Plant at this station has run well throughout the year with the exception of a breakdown of the large motor in April. The plant requires a thorough overhaul and a duplicate engine is now very desirable.

The plant are the plant at this station has run well throughout the year with the exception of a breakdown of the large motor in April. The plant requires a thorough overhaul and a duplicate engine is now very desirable.

The number of units generated was 75,909 B.T. units at an average cost of 1.865d. per unit as compared with 68,612 units at a cost of 2.231d. per unit for the previous year.

44. Greyville.—The lighting and power supply at this station has been maintained successfully and without failure throughout the year.

45. Durban.—The Power Station Plant has run constantly during the year and has successfully met

all demands upon it. The current generation has shewn a heavy increase over the previous year's working of nearly a quarter of a million B.T. units. The actual figures are:—

Total current generated for year 1906 = 1,258,341 B.T. units.
" " 1905 = 1,036,712 "

Increase = 221,629

The average monthly output for the year under review has been 104,861 B.T.U. as against 86,392

The average monthly output for the year under review has been 104,001 B.T.U. as against 50,052 B.T.U. in 1905.

The average work's costs per unit distributed are 1.075d. and the total costs of the year's working £5,177 9s. 5d. as compared with a work's cost per unit of 1.163d. and a total expenditure of £4,818 15s. 1d. for 1905.

The whole of the generating plant has been in use throughout the year, and but little opportunity has been available for more than actually necessary repairs. It is therefore satisfactory to record only one general interruption of supply and that due to a steam pipe failure early in the morning.

A 105 Kilowatt steam generator was put down temporarily, in October, to assist in meeting the heavy demands.

demands.

Elandslaagte dross coal has been used throughout the year with the best results in all respects.

The coal and ash hoppers and elevator have been roofed in with great advantage and I give below a brief list, "a." of work carried out in the Power Station, and "b." of construction work in connection with the unification of the Railway and Harbour electricity supplies.

a. Overhead galleries and stairways in engine and boiler rooms.

Pneumatic service brought into use. Superheater rebuilt.

Superheater rebuilt.
Vacuum oil discharge put in.
New 8 inch steam main.
Temporary generator set installed.
Grouping of smaller feeders.
Roofing in coal handling plant.
b. Feed pump removed and put on new site.
New feed tank and connections erected.
Erection of high tension switchboard gallery in engine room.
Turbo-alternator foundations in hand. Turbo-alternator foundations in hand.

The foregoing lists do not take into account the general maintenance and overhauling work which has

The foregoing lists do not take into account the general maintenance and overhauling work which has been carried out as time permitted.
46. Motors.—The horse power of new motors installed during the year amounts to 151, making a total of installed horse power of 2,073\(\frac{3}{4}\). There were 19 breakdowns, none of which could be considered of a serious nature. The new electrical workshops were completed and occupied in August. Construction work has been greatly handicapped, partly by the ravages of malaria and also through the military operations during the native rebellion.
47. Lighting.—The usual maintenance has been carried out, while the additions include the new General Stores, alterations and additions to the Head Office lights, overhauling the Point Goods Sheds, and installation of four "flame" are lamps on Durban Platform.

GENERAL REMARKS.

48. Train Lighting: Van System.—The train lighting work increases steadily every year. The total number of trains lit by the van system was 11,891, an increase of 701 over the previous year. The failures numbered nine. The average cost per train trip was 7s. 2d., this being a saving per train trip over the previous year of 3s. 9d.

trip over the previous year of 3s. 9d.

49. Stones System.—The coaches now lit by this system number 73, being an increase of 33 per cent. over the previous year. The number of trips has increased from 8,999 in 1905, to 12,794 in 1906. The total complete failures were 9 only, or 7 less than the previous year with a much larger number of vehicles in use.

I regret to say that this has not been accomplished with a corresponding reduction in the costs of working. The cost per trip has gone up to 4s. as compared with 3s. 1d. for 1905, and 4s. 10\frac{3}{4}d. in 1904. This is explained by the fact that:

a. In the earlier part of the year a closer sub-division of the working expenses of the Stones and van system was made to the disadvantage of the former.

b. A large number of vehicles were fitted with new cells and otherwise overhauled, many of which would have been done in 1905, but for the non-arrival of the material.

c. The average trip is now much longer than any previous year, on account of the corridor train running daily instead of bi-weekly as hitherto.
d. The disorganisation of the staff due to Militia being called out. This fell very heavily on the train lighting staff.
e. The rapid growth of the electrically equipped stock has caused congestion at the Depôt, where this class of work is carried out. The result of which is that often it is impossible to overhaul the vehicles in the time available before they are wanted again, and also men have to wait on the shunters, as the cleaning, oiling, and adjusting of the machines is done in a corner of the yard where shunting is constantly being carried on. The men have to crawl under the vehicles and lie on their backs in order to do their work. This should be remedied as soon as possible by the provision of a proper shed with pit and locked sidings. locked sidings.

The following tables shew the growth of electric train lighting:—

Coaches	wired for Van S " both S " S.P. o	ystems		1903-4. 347 28 14	1905. 373 29 29	1906. 380 32 42

50. Statements.—The following statements are appended hereto:—
Annexure I. General Statement of Expenditure for 1906.
Annexure J. Statistical Statement of Expenditure.
Annexure K. Comparative Statement of Generating Costs.
Annexure L. Comparative Statement of Train Lighting Costs.

F. W. MILLS, Chief Electrical Engineer.

GENERAL OBSERVATIONS.

- 51. Maintenance of Train Service.—The train service generally has been maintained in an efficient manner throughout the year, more especially the Main Line Mail and Passenger Service, for, with the exception of a few delays brought about by occurrences impossible to foresee, correct time has been kept.
- 52. Engine Power available.—The Traffic Department have at all times been supplied with what engine power they required, and it has not been necessary to cancel trains through shortness of engines. Trade depression generally has, no doubt, played no small part on this phase of the question, as the number of trains run is consequently less.
- 53. Axle Boxes.—The axle boxes of the high capacity vehicles have been giving the average amount of trouble, and while it is impossible to completely eradicate the evil, it is hoped an improvement will be effected as the new method of packing boxes is gradually introduced.

Delays to passenger trains as a result of hot boxes is now of rare occurrence.

- 54. Banking Engines.—The working of trains under the Banking System is giving good results, and is being introduced where portions of the line afford this mode of working being carried out economically.
- 55. Dynamometer Car.—Several tests have been made with a Dynamometer Car in the hope that accurate readings of the draw bar pull could be taken, but so far results have not been very encouraging, as, owing to the pulsations of the engines, which are brought about by the heavy banks, and the small diameter of driving wheels, it has been quite impossible to obtain anything like a readable diagram. I am getting all the available information I can on the subject, and hope to be able to furnish the van with a better instrument than the one it is presently equipped with.
- 56. Waste Oils.—After certain satisfactory experiments were made to chemically treat recovered waste oils, sanction was given the Department to prepare a permanent plant, and this is accordingly being done. It is expected that the apparatus will be complete and in operation in the course of a few weeks.
- It is estimated that 3,000 gallons of recovered oil will be treated annually, of which 2,500 gallons of purified oil will be obtained.

Comparing the total yearly expense in dealing with above quantity of purified oil, and the cost of the mixture of oil and paraffin in use by the Department, a considerable saving annually is expected.

57. Estcourt-Weenen Railway.—The whole of the rolling stock for the Estcourt-Weenen 2ft. gauge railway has been received and erected in the Durban workshops. The engines and wagons are at present in use for ballasting purposes and carrying traffic to Halfway House.

Wooden frames have been constructed and fitted to the carriage bogies, but, as wagons are also being used for ballasting, additional bogies have been ordered and upon arrival will take the place of carriage bogies at present under wagons, the carriage bogies then being assigned to their original stock.

- 58. Rolling Stock for Bethlehem-Kroonstad Line. -- We have received from the Central South African Railways the following Rolling Stock, handed over in connection with the working of the Bethlehem-Kroonstad Railway, viz.:-

 - 40 Steel Bogie Wagons. 60 Four-wheeled low-sided Shorts. 20 Four-wheeled low sided Longs. 10 Cattle Trucks.

 - 2 Passenger Brake Vans.

Three of the Central South African Railway 7th class type of Tender Engines were also handed over, and have since been working on the Bethlehem-Kroonstad Line in conjunction with the five Dubs engines fitted with cylindrical tanks, the latter method being necessary until the water supplies on this line are completed.

As per arrangement this Department will set aside the carriage stock (four 1st and 2nd compos. and two 3rd class carriages) to be handed over in connection with this line.

- 59. Engine Weighbridge, Durban.—The engine weighbridge which has been in the Department's possession for about four years, is still lying idle awaiting erection. It is hoped that its erection will be sanctioned during the forthcoming financial year.
- 60. Turnstiles for Latrines, Durban Yard .- I trust that the erection of turnstiles for latrines will be sanctioned during the ensuing year.
- 61. Fencing Durban Works.—Although the fencing of Durban Works has been under consideration for some years, nothing tangible has resulted.

Thefts unfortunately recur, owing to works not being sufficiently protected, in addition to which another danger is experienced in that opportunity is afforded for incendiarism.

- 62. New Machinery.—The importation and erection of the following machines and tools authorised during last financial year should greatly benefit the Department, and be the means of increasing the output with a corresponding reduction of manual labour:

 - (1) Universal Horizontal Milling Machine with Motor.
 (2) Vertical Milling Machine with Motor.
 (3) One Punching Machine.
 (4) One Automatic Copper Stay Machine with Motor.
 (5) Three-headed Drilling Machine with Motor.
 (6) One Roots Blower.
 (7) One Tyre and Wheel Drilling Machine.
 (8) Cutter Grinding Machine with Motor.
 (9) One Treadle Driven Guillotine Squaring Machine.
 (10) One Treadle or Belt driven Engraving Machine.
 (11) One 5-ton Hydraulic Crane.
 (12) One 3-ton Crane.
- 63. Central Store, Durban. I would again urge the necessity of erection of a Central Locomotive Store in Durban workshops to deal with necessary stores required for renewal and maintenance work in this Department.
- 64. Improvements to Estcourt Station Yard .- The scheme for the improvement of Estcourt Station yard by providing new engine shed, pits, siding, coal stage, and turntable, unfortunately could not be entertained, although I consider proper accommodation and protection for the engines is necessary, and that in the interest of economy such should be provided.
- 65. Staff.—The following is a summary of the staff employed in the Locomotive Department as at 31st December, 1906, viz.:-

Staff.	Durban.	Greyville.	Maritzburg.	Ladysmith.	Charlestown.	Total.
Salaried Wages Indians Natives	110 1,409 300 484	8 244 149 51	11 263 63 128	12 272 77 53	3 63 30 56	144 2,251 619 772
Total	2,303	452	465	414	152	3,786

It is with regret that I have to record the deaths of Inspector W. Bird, Foreman Coachmaker G. Leverett, and Finel Storeman A. Elliott, during the past year, all of whom were old and valued servants of the Department.

I have again pleasure in placing on record my appreciation and thanks to the staff for their loyal support in the administration and working of this department during the year just ended.

66. C.S.A.R. Corridor Stock.—During the past year this Department has undertaken to build:

4 Dining Corridor Cars. 8 First class " ' " 12 Second " " "

for the C.S.A.R. Administration, for use on through train service.

I am pleased to say that the work is well in hand. The bodies of 4 dining cars have been erected, also the frames for 4 second class coaches, and all superstructure material prepared for the remaining second class carriages.

Material is now coming to hand for the underframes and bogies of this stock, and the work will be expedited in order to comply with terms of agreement.

67. Retrenchment.—In consequence of continued depression in the Colony it has been found necessary to exercise rigid economy in all branches of work during the past two years.

It will not be possible to further reduce expenditure to any appreciable extent, in view of increased mileage, without either (a) impairing the efficiency of stock, (b) reducing our works programme, or (c) affecting the employment of the staff in the service.

68. Condition of Stock.—Improvement continues to be made in the condition of machinery and stock, despite the fact that each year adds to its age, and increases the maintenance work and expenditure accordingly.

Considerable lee-way has yet to be made in bringing stock to a thorough state of efficiency and repair.

- 69. Certificate.—I hereby certify that locomotives, carriages, wagons, brake vans, stationary and pumping boilers, machinery, tools, travelling cranes, etc., have been maintained in as good order and repair as possible under the existing financial position of the Colony.
 - 70. Statements.—The following Statements accompany this Report, viz. :—

APPENDIX D.]

TRAFFIC DEPARTMENT.

REPORT OF THE TRAFFIC SUPERINTENDENT FOR THE YEAR ENDED 31ST DECEMBER, 1906.

THE GENERAL MANAGER OF RAILWAYS,-

I beg to submit my report for the year ended December, 1906, embracing the following subjects:-

I.—Proposed Marshalling Yard and Goods Shed on Congella Railway Reserve.

II.—Banking of Down Trains on 1/30 gradients,

III.—Advertising and Industrial Expansion.

IV.—Industrial Expansion.

V.—Road Motors.

VI.—Motor Trains.

VII.—Native Rebellion.

VIII.—School Vacations.

IX.—Suburbay Traffic.

VIII.—School Vacations.
IX.—Suburban Traffic.
X.—Station Lighting.
XI.—Laundry.
XII.—Cleaning and Funnigating of Carriages.
XIII.—Cleaning and Funnigating of Carriages.
XIII.—Time-keeping of Mail, Passenger and Mixed Trains.
XIV.—Improved Point and Signal arrangements.
XV.—Union Switch and Signal Company's Electric Train Staff Instrument, Model No. 2.
XVI.—Water Supplies.
XVII.—Coloured Traffic.
XVIII.—Coal Traffic.
XVIII.—Coal Traffic.

XIX.—European Staff. XX.—Coloured Labour.

I.—PROPOSED MARSHALLING YARD AND GOODS SHED ON CONGELLA

1. A large area of the Congella lands has now been reclaimed and a portion reserved for railway purposes. It might be found advisable to revive a proposal which was under the consideration of the late Administration during 1904, action being then deferred until the land was made suitable (vide General Manager's circular 137, April 1904), to utilize a part of that land to establish goods sheds, marshalling sidings, &c. as a relief to the congested sidings at Durban, and if practicable to define the following comprehensive scheme:-

RAILWAY RESERVE.

- a. Marshalling yard, storage sidings for shipment coal, goods sheds, &c., to gradually concentrate all railway goods work presently done at Durban at the reclaimed Congella land.
- b. New line giving more direct connection with the Bluff, in order to facilitate and reduce mileage, in the exchange of traffic on both sides of the harbour.
- 2. Additional Platform Facilities at Central Station.—The adoption of this scheme will have the advantage of relieving the congestion of the passenger platforms at the Central Station, which is gradually becoming more acute, particularly during the morning and evening "crush" hours, and also at holiday seasons, and additional platforms must be contemplated to relieve it.
- 3. Close proximity of Locomotive Works and Goods Sidings prevents extension of Passenger Shed.— The large area occupied by and allotted to the use of the Locomotive Department practically adjoining the present passenger shed, renders any satisfactory extension of the platform accommodation impracticable, until the goods traffic sidings are removed and accommodation provided at Congella.
- 4. Present Facilities for Shunting Trucks and handling Goods Traffic Uneconomical.—The goods sheds facing Pine Street have been gradually extended, often in a manner which renders the economical handling and shunting of traffic impossible, and for the same reason the work of the checkers impeded, and facilities for the public and handling of goods mechanically are of a

primitive and uneconomical character, whereas with modern designed sheds equipped with mechanical appliances the saving in wages alone would more than pay the interest on capital cost of new buildings.

- 5. Corporation Ground too Expensive.—The value placed by the Corporation on suitable sites near to the centre of the town would render the cost of extending, adjacent to the present yard, very heavy.
- 6. Facilities required in order to cope with present and probable future Requirements of Traffic at Congella.—The large area reserved on the Congella Reclamation for railway purposes should be laid out so as to provide:
 - a. A large sorting and shunting yard at which all traffic could be dealt with.
 - b. A modern goods shed capable of dealing with probable requirements for the next 25 years, with provision for subsequent enlargement.
 - c. Repair yard for rolling stock.
 - d. Running shed for goods locomotives.
 - 7. Access to and from proposed New Marshalling Yard, &c.—Through access :
 - a. With Point via the Esplanade proposed Reclamation.
 - b. To Durban Central station for connection with North Coast Line, and
 - c. With the main line to South Coast Junction, should be provided from sorting and goods yards.
 - d. Access to the goods sheds by road in the direction of Berea Road Station, and to the area north of the existing main line by means of overbridges will be required.
- 8. Provision of Passenger Station on Esplanade.—The existing station at Durban is most inconveniently situated for sea-borne passengers. A large area of land will be reclaimed when the Esplanade Quay is built, and provision might be made for a passenger station where seaborne passengers with luggage for the interior could entrain direct from steamers.

The present station could be used for North Coast Line, Excursion and other Passenger traffic; the area of land between it and the locomotive workshops will probably afford sufficient scope for the expansion of this traffic.

- 9. Release and sale of land in Pine Street not required under proposed new scheme.—The scheme as outlined above will release for sale valuable land, belonging to the Department, facing Pine Street; also allow of the closing of the present Point line with the opening of the Esplanade connection, and provide conveniently placed modern goods sheds at both extremes of the Town: Point, Railway and Bond Store for the East, and at Congella for the West end.
- 10. Economical features of Scheme.—The cost of such a scheme will be very much less than if carried out on land purchased elsewhere, while in addition to the amount realised by the sale of the land facing Pine Street, other factors contributing to the provision of interest on the capital expenditure, will be found in the more economical handling of goods and the concentration of railway and shipping work contiguous to both sides of the Bay, and in direct connection with each other.
- 11. The time in my opinion is now opportune when such a scheme might be formulated, and any increased accommodation provided in future should as far as practicable harmonise with the proposition submitted.

II.—BANKING OF DOWN TRAINS ON 1/30 GRADIENTS.

- 1. The system of working Down goods trains over the severest gradients, viz.:
 - a. Estcourt and Highlands 15½ miles, 1/30 gradients.
 - b. Umsindusi and Thornville Junction $8\frac{3}{4}$ miles, 1/30 gradients.
 - c. Drummond and Alverstone 21 miles, 1/30 gradients,

which was brought into operation during the past year has led to substantial reduction in expenses, as well as expediting the transmission of the coal traffic to the Point.

- 2. The advantages briefly stated are as follows:
 - a. The saving in train mileage by the banking engine not being required to run the entire distance hitherto necessary in the case of "Cross Trip" trains.
 - b. The dispensing with the "Cross Trip" train guards.
 - c. The easing of the train staff sections by reduced number of trains in consequence of the increased loads of banked trains and therefore greater facility in operating the trains.
 - d. Retention of the unbroken load thereby obviating shunting operations at both ends of the severe sections, saving of time, and reduced delays and reaction in consequence. Latter applies to both clauses c. and d.
 - e. The conveyance of increased load being the equivalent of the two single loads for the tractive power of the respective engines employed, plus the weight of one van, 10 tons, dispensed with, and
 - f. Expeditious transit of traffic by abolition of staging, and lessening demand for siding accommodation.

- 3. Until recently goods trains were assisted by a second engine from Inchanga to Bothas Hill, the full distance run by the cross trip trains, but by making provision for watering the engine at Drummond, it was found practicable to limit the "banking" to the section Drummond and Alverstone, thereby effecting a saving of 9½ train miles on each trip, and similar arrangements are being made to terminate the "banking" over the Umsindusi—Thornville Junction section at the 62½ mile post, which alteration, together with the saving in mileage between Maritzburg and Umsindusi, will also effect a saving of 12½ train miles per trip.
- 4. A particular feature in connection with the "banking" system, to which I might call attention as worthy of careful consideration in conjunction with future improvements to the main line, is that the "banked" load, over the more severe gradients is equal to, if not greater than, the ruling load over the 1 in 50 gradients. On completion of the improvements to a 1 in 50 grade between Ladysmith and Estcourt, the load of 390 tons gross can be taken throughout to Mooi River with the assistance of the "banking" engine between Estcourt and Highlands; and with a continuance of these improvements on the following sections, viz:
 - a. Mooi River and Nottingham Road.
 - b. Lidgetton and Hilton Road.

the same load, with the assistance of the "banking" engines, over the Umsindusi-Fox Hill and Drummond-Alverstone sections, can be taken throughout from Ladysmith to Point. The present load from Cato Ridge to Bothas Hill is 368 tons, but recent dynamometer trials have practically demonstrated that a load of 390 tons can be satisfactorily hauled by the "Hendrie" engine.

5. The ruling load for each train under existing conditions between Ladysmith and Maritzburg is 215 tons gross, and between Maritzburg and Durban 200 tons gross, so that the advantages of increasing the ruling load to 390 tons gross, with an increasing coal tonnage is very obvious, and justifies the expenditure necessary to continue the work of improving those portions of the main line indicated, owing to the reproductive advantages effecting greater economies in working by the reduction in mileage, and the equally important accelerated transportation of shipment coal, and also, greater use of rolling stock.

GRADES AND HAULING POWER.

- 6. The question of grades is a most important one in connection with the economical working of railways, and by continuation of the improvements of the main line, the financial results of the past are capable of still greater economy in the maintenance of the permanent way, etc., and by increased loads.
- 7. The following statement will illustrate the advantages of easier grades and hauling power of locomotives under existing authorised speeds of trains:—

		HENDRIE	REID ENGINE.				
GRADE.		Passenger		G GOODS	WORKING GOODS TRAINS.		
	Tons Hauled.	Speed per Hour.	Tons Hauled,			Speed per Hour.	
1 in 30 1 in 50 1 in 60 1 in 70	170 210 270	12·85 19·28 24·86	200 390 485 580	9·1 8·32 13·30 14·1	200 390 485 580	9·1 8·32 13·30 14·1	

It will therefore be seen that the same engine working a Passenger train weighing 210 tons over a grade of 1 in 50, or weighing 270 tons over a grade of 1 in 70, at speeds of 19.28 and 24.86 miles per hour, respectively; over a grade of 1 in 30—the ruling grade of the Colony—a train of 170 tons only can be taken, at the low speed of 12.85 miles per hour.

When the same engine is put to haul a goods train on a grade of 1 in 30, it can only take 200 tons at the speed of 9.1 miles per hour, but on a grade of 1 in 70 it can take a train of 580 tons at 14.1 miles per hour.

8. The following table will show the increase in the train loads effected by the Deviations, which, with the exception of the down section from Ladysmith to Estcourt, have been completed:-

DEVIATIONS.		TRAIN	LOADS.
DH/IIIIONS,		UP,	Down.
PADLEYSHILL CREST. Originally 1 in 30 grade Altered to 1 in 50 grade	 		295 425
UMSINDUSIMARITZBURG. Originally 1 in 30 grade Altered to 1 in 50 grade	 	295 390	230 442
ESTCOURT—LADVSMITH. Originally 1 in 30 grade Altered to 1 in 50 grade	 	242 390	325 390

- 9. These deviations having been completed, the following sections which operate against the ruling down load of 390 tons, remain to be dealt with:

 - a. Estcourt to Highlands.
 b. Mooi River to Nottingham Road.
 c. Lidgetton to Hilton Road.
 d. Umsindusi to Thornville Junction.
 e. Drummond to Alverstone.

The most urgent of these are "b" and "c," on completion of which it will be possible to convey a continuous load of 390 tons from Ladysmith to Durban, by the assistance of the "banking" engines over the sections "a," "d" and "e." The latter, it is anticipated, will be a very costly undertaking, and the "banking" system should be continued until these improvements are effected.

- 10. At pages 60 to 71 of my American Report I have dealt very exhaustively with the economical aspects of Train Loads, Tractive Power, and Improvement of Grades, in relation to these railways, but I would specially direct attention to the far-reaching advantages obtained by the Dynamometer Car tests on the American and British Railways in deciding what class of locomotive and rolling stock may be most economically worked over those lines.
- 11. One of our cars has been fitted with a dynamometer spring in connection with a Boyers' speed recorder, and a series of trials have been made on the main line, as it is of the utmost importance that we should ascertain:
 - a. Whether the locomotives now in use are transmitting a correct proportion of their indicated horse power to the drawbar, or whether their internal friction and the rail resistance are to the wheel base adopted, are consuming an inordinate amount of the power, and if so, whether the wheel bases of any new locomotive at least cannot be so modified as to overcome this.
 - b. Whether a ton of paying load is more easily hauled in any particular class of rolling stock over this railway, which owing to its extreme curves and grades presents almost unique conditions.
 - c. Whether the grade compensation for curvature allowed on the deviations recently constructed and contemplated is sufficient.
 - 12. The experiments already made by the dynamometer tests have demonstrated that:
 - a. As the train load is concentrated in few vehicles the tonnage resistance is diminished.
 - b. The drawbar pull and not the tonnage is the only economical basis of computing the train load, and thus securing the engine being worked to its full capacity.
- 13. In a recent interesting experiment made on the Lancashire and Yorkshire Railway Company it was demonstrated that their highest capacity truck, viz. (30 ton) could be hauled with less power than that of a lower capacity. This is particularly interesting and in addition to the advantage obtained of being able to convey a given quantity of traffic in fewer trucks and with less non-paying weight, there is an enormous advantage gained by economising space at stations where sidings are limited and the extension of the accommodation would be very costly; this will be readily appreciated when it is stated that the daily average tonnage of shipment coal under load exceeds 15,000 tons, for which sidings have to be provided at Durban, Point and the Bluff. Point and the Bluff.

LOADS TABLE.

14. The subjoined statement indicates the improvements which have been effected in the loads since 1903, and the further advantages to be derived by the proposed deviations between Mooi River and Nottingham Road and Lidgetton and Hilton Road,

TRAIN MILEAGE.

15. The total train mileage for the year was 4,628,953 as against 4,483,158 for the year 1905, or an increase of 145,795 miles. The increase is accounted for by the expansion of the Natal coal industry, the Native Rebellion, and the extensions of the Natal-Cape, Upper Tugela and Orange River Colony Lines (117 miles) viz. :—

a. Natal-Cape Extension, 15¼ miles.
b. Upper Tugela " 13¼ "
c. Orange River Colony " 88½ "

- 16. Daily attention; by scrutiny of train journals, loading of trains and trucks; has ensured economical train working and the restriction of train mileage.
- 17. The passenger service has, not without dissatisfaction to the public, been reduced as far as the conditions will admit, the extent of which might be gauged by a comparison of one week's mileage in December, 1906, as against a corresponding week in 1905, which shows a decrease of 2,572 train miles for the week, or, allowing for the increased mileage (1,964) over the new extensions, etc., 608 miles per week.

III.—ADVERTISING.

- 1. The advertising possibilities in connection with these railways is well worthy of continued attention. In the past, in addition to newspaper advertising, guide books, &c., descriptive illustrated articles on Natal and her Railways have been regularly contributed to the South African, Australian, and British Press, and to Messrs. Thos. Cook & Sons' monthly Gazette, which is circulated in all parts of the world.
- 2. Photographs of coast and inland scenery are exhibited in panels of carriages, and arrangements have been made to inter-change views with the Cape and Central South African Railways. This will not only enhance the interior of the carriages, but also have a distinct advertising value.
- 3. Selected enlarged mounted views of the Drakensberg, &c., have also been supplied to the Chambers of Commerce, and principal Hotels in South Africa, Imperial Institute, &c., London, and in the permanent Exhibition of the World's Railway, Chicago.

IV.—INDUSTRIAL EXPANSION.

- 1. There is also the question of industrial expansion, and in my American Report there is reflected the outline of a scheme adopted by certain American Companys to this end by the appointment of what is termed an "Industrial Commissioner." There is so direct a connection between the creating and the subsequent handling of traffic that the greater the development of industries and the opening up of lands the greater the prosperity of the railways, and the chief aims of the Commissioners are directed towards "creating" industries by ascertaining most suitable localities, deposits, and general adaptability of physical and climatic conditions, as well as the profitable opening up of new stock and agricultural areas.
- 2. He is in direct touch with the railway authorities, and all necessary siding or other conveniences are thereby rapidly advanced to promote the quickest possible development of traffic and producing projects.
- 3. Other South African Railway Administrations have already mooted the establishment of a Railway Industrial and Intelligence Bureau in London, and there is much to be said in support of the institution of an office for the dissemination of intelligence in respect of all matters relating to Natal.

V.—ROAD MOTORS.

- 1. The success which has attended the introduction of road motor cars for the conveyance of passengers and general goods in rural districts of Great Britain where there is no direct rail connection, as feeders to railways, prompts me to again suggest their adoption where they could be utilised in certain districts of this Colony.
- 2. Experience goes to prove that the provision of such services *create* and foster a traffic, which, should it in course of time develop beyond the capacity [of the cars, may justify the construction of a light railway.
- 3. The outlay involved by the essential improvement of the roads to be used by the motor cars is a permanent economic asset which contributes to the development of the Colony by aiding the collection of traffic from agricultural; districts to supply the local markets, whereby new areas of supply are opened to the public.
- 4. It is also possible for improved postal facilities to be afforded to remote districts if the cars are utilised for the conveyance of mails.

- 5. With the aid of a regular service the farmers in districts of Natal where progress is impossible because of the difficulty of communication could be put into direct touch with the railways and benefit in point of facilities, cost and time.
 - 6. The specific advantages of road motors may be briefly tabulated as follows:-

(a) Reduced capital outlay involved in establishment of rail service.

- (b) Reduced working cost.
 (c) Elasticity of service, i.e., motors not tied to rails, being unremunerative in one district can be transferred elsewhere.
- 7. The suitability of roads and their construction and maintenance are important factors in the successful and economical working of cars.

VI.—MOTOR TRAINS.

- 1. The question of the introduction and working of motor trains on these lines has, for some time, received careful attention.
- 2. Watchfulness as to the experience of British and Colonial Railways during the past twelve months confirms the opinion I formed when in England in 1905 (see my American Report, pages 123 and 127), and supports the attitude adhered to by the Administration, viz., that keeping in view the severe grades, and also the peculiar nature of our passenger traffic by reason of the necessity for the segregation of Indian and Native passengers, the most economic manner of dealing with the motor train problem in Natal is by extended use of small detachable steam engines, which means the utilisation of the older locomotive stock.
- 3. Several railway companies who formerly experimented with the single unit motor train are now reverting to the use of their small locomotives with a specially designed coach to meet local traffic requirements; prominent amongst which are the London and South Western, North Eastern, Great Western, and London, Brighton and South Coast Railways, and as a result of experience, the general opinion at the present time is that, taking into consideration interest on first cost, and allowing for the wages for the third man, a small locomotive retired from regular service can be equipped with a single car to work a branch line cheaper than the line can be worked with a unit motor car. This cautious policy has been followed by Natal with satisfactory results.
- 4. Interesting and successful experimental trials have been made with gasoline rail cars by the Union Pacific Railway, America, and are still being continued. It is the intention of the Central South African Railway Administration to have a series of trials made with a gasoline type of motor, the result of which will be watched with interest by other South African Railway Administrations, not only as to its economical advantages but also to its utility in hauling one or more trailers, according to the exigencies of the service required.

VII.—NATIVE REBELLION.

- 1. The table which is given below enables one to form an idea of what the Department had to contend with in meeting the many emergent demands for rolling stock, &c., in connection with the Native Rebellion, and it is pleasing to record that not a single hitch occurred in moving the different columns over these railways.
- 2. I cannot refrain from expressing my appreciation of the excellent services rendered by the Traffic Officers and Staff during a period which imposed a heavy strain upon them.

Date.	Officers.	Men.	Natives.	Horses,	Mules.	Oxen,	Guns and Limbers.	Ox Wagons.	Supplies.
February March April May June July August September October	92 134 71 7 25 177 184 4	1,608 1,542 3,086 2,169 2,200 3,753 4,473 922 183	5 129 24 147 364 576 2,899 903 200	1,477 1,746 2,696 1,207 1,459 2,758 3,380 669 191	30 178 75 367 61 70 50	16 24 6 80 84 1,015 4	8 35 29 5 12 9	7 7 24 1 1 41 70 7 99	Tons. 450 245 296 2,036 1,890 1,961 1,855 1,052 630
	700	19,936	5,247	15,583	831	1,229	98	257	10,415

4. The greater portion of the Militia Force was conveyed by special trains, the ordinary passenger trains being utilised (when serviceable) in conveying small parties.

VIII.—SCHOOL VACATIONS.

1. In the past difficulties have been experienced in making arrangements for the comfortable conveyance of children to and from schools at Vacation periods,

- 2. A too tardy response on the part of Principals of Schools and also parents to co-operate with the Department has been responsible for the inconvenience inseparable from having to carry large numbers of children without previous advice.
- 3. Spare carriages are stored at various centres at these periods to meet emergencies, and with a more cordial acquiescence from the school authorities to our overtures, inconvenience to both the scholars and the Department should almost entirely disappear.

IX.—SUBURBAN TRAFFIC.

- 1. The new design of carriage of the 60 ft. 6 in. type with ten compartments in each, providing accommodation for 100 passengers recently placed on suburban traffic has enabled the Department to convey 480 passengers in one train of five carriages as against 482 passengers in one train of nine carriages of the 36 ft. 6 in. type. These new carriages are not only found very useful for suburban traffic, but are also of considerable advantage in dealing with excursionists during holiday seasons. There is also the advantage of the increased drawbar pull over the severe grades and more economical working of trains.
- 2. The following comparison will better illustrate the advantage referred to in the preceding paragraph:—

	No.	Vo. No. of	No. of Passengers.			Length	Weight	No.	
	of Cars.	Compts.	1st.	2nd.	Total.	of Train.	of Train.	of Axles.	
60 ft. 6 in. type of carriage 36 ft. 6 in. type of carriage In favour of 36 ft. 6 in. type In favour of 60 ft. 6 in. type	5 9 4	50 53 3	150 152 2 	330 330 	480 480 8 	302 ft. 6 in. 328 ft. 6 in. 26 ft. 10 in.	Tons. Cwts. 139 11 149 16 11 5	20 36 16	

3. Four more carriages of the 60 ft. 6 in. type are under construction in the Workshops, and will shortly be completed and placed on traffic.

X.—STATION LIGHTING.

- 1. The better illumination of stations has recently been receiving special attention, and experiments are at present being carried out at Berea Road with a view of making comparative tests of the illuminating power and cost of "Petrolite" as compared with acetylene gas and paraffin oil. The experience obtained of the petrolite lamp has, so far, been satisfactory, but fragile gause mantles are necessary and costly adjuncts.
- 2. Acetylene gas, which is installed at Umbilo, Bellair, Cato Ridge and Glencoe Junction, while giving satisfaction, is too expensive, and enquiries are being continued with a view, if possible, of securing a cheaper illuminant.
 - 3. The following statement shows the cost of Station lighting during the past year:—

		PER 16	CANDLE	POWER.		
Petrolite					0.06 per	hour.
Parafin	•••			•••	0.19	"
Acetylene Gas					0.35	77

XI.—LAUNDRY.

- 1. Previous to the year under review, Departmental bed linen, rugs, towels, &c., were washed at depot stations by dhobies, with the exception of the corridor train linen, which was dealt with by a private firm, which also periodically fumigated all rugs, pillows and mattresses. This arrangement, which necessitated the storage of a large quantity of linen at the various depots, was not satisfactory and it was decided to centralise the work at Durban, where a fully equipped laundry and fumigating chamber were erected, and brought into operation on the 1st April, 1906.
- 2. With the introduction of this establishment at Durban it has been possible to wash and fumigate daily each complete set of bedding immediately after it has been used and also to withdraw the reserve stock from the various depots, all demands being met daily from Durban.
- 3. The cost of erection of the laundry and concentration of the work has been more than justified by the economical results.
 - 4. The following statement shews the number of beds issued during the years 1905-6:—

		/	Through.		Local.		Total.
1905	•••.		7,080	•••	4.772		11,852
1906			5,662	• • •	3,900	•••	9,562

XII.—CLEANING AND FUMIGATION OF CARRIAGES.

- 1. A marked improvement in the interior of carriages upholstered in "moquette" and "rep" has been effected by the use of the vacuum cleaning apparatus, and also a decrease in the expense of cleaning the exterior by the discontinuance of the use of oil.
- 2. The climatic conditions of Natal have a deteriorating effect upon carriages, and so soon as money can be spared sheds should be erected at Durban and Maritzburg for their protection.

XIII.—TIMEKEEPING OF MAIL, PASSENGER AND MIXED TRAINS.

1. The following figures show the timekeeping of mail, passenger and mixed trains for the year ending 31st December, 1906:—

Total.	Number of Trains.						Percentage.					
Number of Trains.	Right Time.	1 to 5 Minutes late.	6 to 10 Minutes Jate.		16 to 20 Minutes late.		Right Time.	1 to 5 Minutes late.	6 to 10 Minutes late.	11 to 15 Minutes late.	16 to 20 Minutes late.	
29,195	22,127	4,147	1,419	555	303	644	75•8	14.2	4.9	1.9	1.0	2.2

- 2. As in railway practice a train within 5 minutes late, is reckoned at "right time," the actual number running to booked time may be taken at 26,274, or 90 per cent. of the whole.
- 3. Although 90 per cent. of the passenger trains have practically run to time it may be mentioned that even better results would heve been obtained, but for the fact that all the branch line extensions are limited to one or two mixed trains, which have to perform the varying work of shunting and transhipping parcels and goods traffic at roadside stations and halts, and for which it is not always practicable to make allowance in the timing of the trains.

XIV.—IMPROVED POINT AND SIGNAL ARRANGEMENTS.

DURBAN.

1. The installation of an interlocking system of points and signals at Durban in April last has worked satisfactorily, and not only ensured greater safety, but also expedited the movement of trains at the Durban Central Station.

MALVERN AND NORTHDENE.

- 2. In continuance of the policy decided upon but deferred owing to financial conditions, the installation of an interlocking system of signalling is being proceeded with at Malvern as part of a general scheme for all main line stations.
- 3. The system of signalling proposed is somewhat costly, and I think every reasonable security as well as efficiency would be obtained if a simpler and less expensive scheme is adopted.

MARITZBURG.

- 4. The installation of interlocking points and signals will shortly be completed and brought into use at Pietermaritzburg Station.
- 5. The whole of the points and signals will be operated from two signal cabins, one at the north and the other at the south end of the station yard, each containing 54 and 30 levers respectively.

XV.—UNION SWITCH AND SIGNAL COMPANY'S ELECTRIC TRAIN STAFF INSTRUMENT—MODEL, No. 2.

- 1. It has been decided to experimentally instal two of the above mentioned instruments between South Coast Junction and Clairmont on the South Coast Line.
- 2. The American instrument is worked on the same principle as the Webb and Thompson's column presently in use on Natal lines, and while the cost is about the same, it is claimed that the expense of maintenance of the former is less than the latter in addition to other advantages.

XVI.—WATER SUPPLIES—CONVEYANCE OF WATER.

1. The expenditure incurred by the department in conveyance of water to meet the demands of the locomotive and other departments during the past year is shewn in the undermentioned statement:—

	То.	of Gallons conveyed.	Train Miles.	At per Train Mile.	Amount.	For use of Department.
New Hanover	Dalton	234,800	187	22.26	£ s. d. 17 7 4	Locomotive.

A1 - C 1 1	.,	12,000	9	13.64	0 10 3	"
Estcourt	Los Kop	16,000 37,200	14 37	13.64	0 15 11	"
Frere	"	2,400	3	21·76 21·76	3 7 1 0 5 5	"
Ladysmith	"	2,800	6	21.76	0 10 11	"
Colenso	"	4,800	7	21.76	0 10 11	"
Dannhauser	Inkwelo	4,000	5	24.90	0 10 5	,,
Ingagane	"	8,000	7	24.90	0 14 6	,,
Newcastle	Dannhauser	12,000	6	24.90	0 12 5	"
"	Inkwelo	4,000	2	24-90	0 4 2	"
Mount Prospect	Charlestown	86,000	19	24.90	1 19 5	"
Total, Locomotive	e Department	13,952,400	5,996		487 16 7	
	Various	471,700	237		23 12 1	Domestic & Maintenance.
	Gross Total	14,424,100	6,233		511 8 8	

2. There are 12 cylindrical and 74 six-wheeled tank trucks employed in the conveyance of water, the capital cost and maintenance of which is as under:—

Description of Truck.		Capital	Cost.	Ma	Maintenance.		
12 Cylindrical trucks 74 Six-Wheeled trucks Total	:::	£ 3,452 12,950 £16,402	0 0	1			-
Donne -i-ti O FOI	 er stat	ement in p	 aragrap 	 h (1)	£656 820 511 1,260	2 8	7 0 8 0
Gross	s cost	for year 1	.906		£3,247	12	3

3. It will be seen from the foregoing particulars that the position of our water supply is not a sound proposition, and it is a matter for serious consideration whether further action should not be taken with a view to improving the supply, especially at those stations where the requirements are greatest, by increasing the storage capacity of the reservoirs, &c. At those stations where the demand is not so great some means might be devised to obtain supplies locally.

XVII.—COLOURED TRAFFIC.

- 1. The question of accommodation for coloured passengers in separate compartments from those occupied by Europeans is beset with many difficulties, but it is receiving the constant care and attention of the staff.
- 2. Conductors having a knowledge of Zulu, Tamil, &c. have been appointed at Newcastle, Ladysmith, Maritzburg and Durban to assist and supply coloured passengers with information in regard to trains, baggage, fares, refreshments, &c.
- 3. Notices, printed in several languages, have been exhibited in the third class carriages, indicating the names and interval allowed at the stations where refreshments can be obtained, and also particulars of tariff.

XVIII.—COAL TRAFFIC.

- 1. The expansion of the Natal coal industry during the past five years has been abnormal, having increased from 596,047 tons in 1902 to 1,235,213 tons in 1906, or 107.23 per cent. increase.
- 2. 71.40 per cent. of our high-sided bogie trucks are in daily use for the conveyance of coal, of which 29.75 per cent. are used in storing reserve coal at the Point and Bluff to await arrival of steamers, &c.
- 3. This is a very serious demand upon our truckage, but it is anticipated that, with the use of the storage bins at the Bluff, rolling stock will be more promptly released. It will, however, be necessary to augment our rolling stock by increasing the cubic capacity of low-sided 35 ton trucks.

XIX.—EUROPEAN STAFF.

- 1. Subjoined statement marked "A" affords a comprehensive reflex of the position of the salaried and wages staff employed in the various grades, at the commencement and end of the year, 1906, illustrating comparatively the variations that have taken place during that period.
- 2. Statement "B" indicates the number of non-effective men in the various grades, shewing the amount involved in wages.
- 3. The demand for reduction of expenditure compatible with the maintenance of an efficient staff to cope with the requirements, has been kept steadily in view, and the result achieved is in no small measure due to the adjustment of the staff throughout the line at the various stations, &c., to meet the prevailing conditions. 'The surplus staff has practically met all vacancies that have arisen through resignations and other causes during the past twelve months.

have arisen through resignations and other causes during the past twelve months.

Decrease in number of staff employed during the year, 119. Reduction in expenditure, £21,962 6s.

CLASSIFICATION OF STAFF.

4. Since taking over the control of the staff (September, 1906,) I had prepared a complete classification of the traffic staff of all grades. In framing the classification, I have endeavoured to fix the grades and rates of pay on a basis that would be fair to the staff and fair to the Colony under existing commercial depression. Its full effect will not be apparent, at once, but I am persuaded it will tend to greater efficiency and economy in working of these railways.

ESTABLISHMENT.

5. In addition to the classification of the staff a fixed establishment has been appointed for each district and station which will simplify the administration of the staff.

GUARDS STAFF "BOOKING OFF" SYSTEM.

- 6. During the year the sum of £41,693 has been expended in respect of guards wages, while £8,125 6s. 1d. represents the overtime earned and from that amount a sum of £3,999 15s. 10d. has been saved by the "Booking Off" system.
- 7. The "Booking Off" System has many commendable features, and permits of each man receiving not less than his monthly wage in addition to an average amount of overtime. The balance of overtime being set aside for the employment of a larger staff than is actually necessary, at practically no extra expense to the Administration. In this way, many capable railway men with their families have, and are being, retained—which owing to the depression in traffic would have migrated to other Colonies—thus placing the Department in command of experienced men ready to meet any expansion of traffic.

TRAINING AND EXAMINATION OF TRAFFIC STAFF.

8. An experience of station duties is regarded as the unit of efficiency, and accordingly the stations are considered the best "School" in which to train youths entering the service.

Promotions and appointments are governed by the results of periodical examinations which engender a wholesome influence and stimulates applicants to study with the object of becoming efficient "all round" rather than "speciality" men.

This has the advantage of bringing to the surface, members of the staff to graduate for better positions in the Administration.

The management of railways is a profession, an art which needs special training and wide experience; it is therefore absolutely necessary that care should be given to the training of the junior members of the service.

Other grades of the service such as Signalman, Staff Custodians, etc., undergo a probation of practical working under capable Station Masters.

STAFFING OF NEW STATIONS.

9. During the year, five new stations were established for general traffic purposes in conjunction with the completion and opening of the undernoted extensions:—

Date of Opening.	Section,	Extent.	Stations.
1st June, 1906	Natal-Cape Extension, Donnybrook to Creighton	151 Miles	Donnybrook&Creighton
	Upper Tugela Extension, Ennersdale to Los Kop	131 Miles	Los Kop.
	O.R.C. Extension, Bethlehem to Kroonstad	89 Miles	Lindley Road & Lovat.

In addition there were three halts converted into fully equipped stations as follows:—

Date of Opening.	Sections.			Locality.	Station.	
16th July, 1906	Natal-Zululand Railway Richmond Branch Line O.R.C. Line				3⅔ Miles	 Amatikulu. Nels Rust. Revelstoke.

A temporary station was opened on the Weenen Narrow Gauge Railway at a point 18 miles from Estcourt on the 4th October, 1906.

SUPPLY OF UNIFORM CLOTHING.

10. The supply of uniform to the Staff under the existing contract is not satisfactory owing to the inferior quality of the material and the delay of the Contractors in meeting our requirements.

GENERAL.

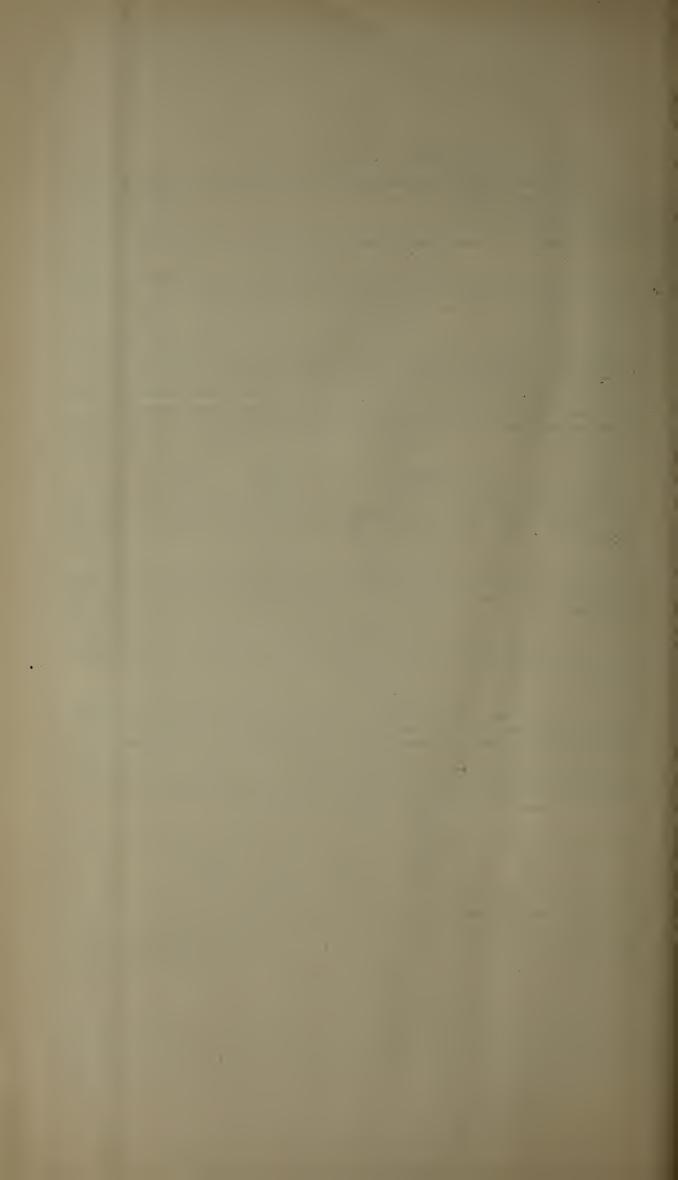

11. The general conditions in connection with the staff in regard to pay, privileges, and leave, etc., are of the most liberal character. The rates of pay compare favourably with the other South African Railways.

XX.—COLOURED LABOUR.

- 1. The cost of coloured labour during the past twelve months has been greatly reduced without impairing efficiency, by the substitution, where practicable, of Indentured for Free Indians and Natives, as well as the re-engagement of the latter at a reduced rate of pay.
- 2. A comparison between the month of December, 1905 and 1906 is given below, which shews a reduction of 421 labourers at an average monthly saving of £819 17s. 11d. It is hoped a still further reduction will be made under this head during the current year.

	Indentured Indians.	Free Indians.	Natives.	
1905 1906	 627 661	764 680	982 611	£ s. d. 4,621 7 9 3,801 9 10

APPENDIX E.]

REPORT OF THE STORES SUPERINTENDENT FOR THE YEAR ENDED 31ST DECEMBER, 1906.

GENERAL MANAGER,-

In accordance with the usual custom I have the honour to submit the following statements and report on the working operations of this Department during the past year:—

1. SUMMARY OF ACCOUNTS OF THE GENERAL STORES DEPARTMENT FOR THE YEAR 1906.

To Balance of Stocks on "Stores and Material Britain through th "Stores imported from	receive e Agent- America	ed from General		£ s. d. 184,135 2 8 2,217 3 2	£ s. d. 188,549 9 3
" Stores imported from " Stores purchased loca " Purchases from other " Surplus Stock taken of	lly Departn		Dept.	39,441 4 8 199,886 12 11 20,239 2 5 6,839 11 2	452,758 17 0
					£641,308 6 3
By Material and Stores in Locomotive Maintenance Traffic Construction General Charges General Stores Joint Stock Harbour Public Works Cold Stores Sundry issues and Claims and Rebate Transfers " Balance of Stocks on	 sales			248,815 7 2 70,562 15 1 40,709 17 4 14,210 3 6 3,109 5 1 2,333 17 5 196 14 8 36,633 13 11 2,592 4 9 1,118 14 3 4,711 19 5 796 13 7 35 4 2	- 425,826 10 4 215,481 15 11 £641,308 6 3

- 2. Although it will be seen from the foregoing statements that the total purchases made during the year 1906 are below the amount expended in 1905, it will no doubt be of some interest to learn that there has been no shortfall in the expenditure made in the Colony, but on the contrary our local purchases have increased by £15,610 over the figures spent in 1905. The Indian imports shew a rise of £6,072 over the sum spent on stores from the same quarter in the previous year, which increase is explained by the enhanced price of rice and oil referred to hereafter.
- 3. The stock on hand at the close of the year, it will be observed, was much higher than that with which the year's work was started; the reason being that during December we received several very heavy shipments of rails and other permanent way material from Home, which, although a large portion of the material was issued for laying into the road shortly after arrival, the book transfers did not take effect until the opening of the new year.

4. The description of the principal purchases covered by the foregoing statement is shewn hereunder :—

6. Coal.—This, the principle item of expenditure exceeds the total of 1905 by 33,713 tons. The steam coal taken for locomotives, &c., was 19,239 tons more than in 1905; the coal supplied to H.M. Navy was also greater by 446 tons, and 786 tons of Household Coal was issued also over and above the quantity of the previous year. Coal for the Harbour Department comes within this statement now for the first time.

this statement now for the first time.

Coal for the first time.

Coal for the first half of the year was taken under contracts which commenced with September, 1905; in July, 1966, new contracts were opened to run for a period of two years at prices which are generally much above what we had to pay under the preceding contracts. The following statement shews the sources of supply and the tonnage of coal purchased in 1906:—

- 7. Permanent Way Material.—The outlay in stock of this description amounted to close upon double the sum similarly spent in the previous year, and the prices for Rails and Fastenings were also higher. All sleepers purchased during the year were hardwoods, and were obtained by local contracts at satisfactory prices. With sleeper contracts the tendency appears to be to quote for earlier deliveries than can usually be given; in some instances delays are too protracted to treat lightly, which indicates the necessity of enforcing the penalty clause. The Department expects delivery on all occasions strictly in conformity with the terms of contract, and if our action on this point is in any way relaxed, I fear that some day we shall find ourselves placed at serious inconvenience.
- 8. Metals.—Owing to the extremely high state of the metal market throughout the year, all brass and copper goods had to be bought at high prices. Tin also, of which we are large consumers, ran very high all through the year.
- 9. Oils.—It will be noticed that our oils cost us very considerably more than in 1905. The principal item in this account is 156,519 gallons of castor, which is most generally used for lubricating wagon and carriage stock, and which during the year cost us on an average 25 per cent. more than in the year previous. Other lubricating oils cost approximately the same as in 1905, but linseed oils were dearer and more of these latter were required. More paraffin was wanted also than formerly—69,764 gallons were purchased under contract prices which were considered very favourable to us.

10. Indian and Native Rations.—The expenditure on rations has been very heavy, as compared with former years, which is mainly owing to the great advances in the cost of rice. To meet these continual rises of the market it was decided to put indentured Indians on mixed rations of rice and meal from the beginning of the year, but the arrangement did not result in so great a saving as was anticipated. Meal was in greater demand, and this also had to be bought at higher prices than in the previous year, the most noticeable period being between May and August, when prices for up country contracts ranged to 50 per cent. above what we had to pay in the same period of 1905.

Meal supplies are obtained by quarterly contracts, but rice is purchased at current market rates. A great deal of comment has been passed from time to time on our method of obtaining rice, and many statements have been put before you and your predecessor in justification of the existing rule. I am quite satisfied that we buy as cheaply as we could possibly expect under any contract system, and apart from the question of price, the present arrangement has

advantages which we could not depend upon under other circumstances.

11. Uniforms.—The clothing contract which started in November, 1905, I regret to say has not so far proved the success which was hoped for. In the first issue the goods did not compare favourably with our regular standard, and the staff was caused a great deal of inconvenience by reason of the innumerable misfits. In their eagerness to remedy the faults exhibited in the first issue an undue length of time was occupied by the contractors in executing the next order, and again discontent spread throughout the uniformed staff on account of the long delays in receiving their equipment of clothing. We have a large range of garments of various designs and materials, and I have no doubt that a contract of this description requires a great deal of skill and very careful handling.

The expenditure on clothing during the year appears to be remarkably low as compared with any year in the past, but this is explained by the fact of much clothing arriving after the

close of the year which should have reached us earlier.

12. Stationery.—This is an item in which expenditure has again fallen below the preceding year as seen in the following:-

> Issues (all Departments) 1905 ... £15,664 11 1 1906 ... £14,601 17 1

In anticipation of issuing tender forms for printing in 1907, it was arranged as customary to endeavour to effect a saving by reducing the variety of papers. After examination of an extensive range a proposed set of standard papers was submitted to a meeting of representatives of departments for consideration. By selection of the cheapest papers suitable for the various forms used there should be a decided saving.

The importation of writing inks was discontinued during the year, and it is hoped that the adoption of inks manufactured locally will prove satisfactory and economical.

13. Local Purchases.—As already mentioned, the amount of money spent locally in stores exceeded the amount expended in 1905. This is partly owing to the extra calls made upon us which could not be met from our own stocks, and partly owing to the desire to foster colonial trade. It has been laid down by Government that a preference is to be given to goods of local production when the same are placed in competition with goods from oversea, but if in making a comparison of prices the preference is to be based on the figure which our stocks ordinarily cost us to import through the Agent-General, I am afraid the preference will need to be a large one to turn the tables often in favour of local enterprise.

Apart from goods of South African manufacture there must of necessity be always a great

deal of local buying to meet demands which cannot be supplied from stock.

14. Tonnage.—The tonnage of goods imported during the year was as under:—

							Tons.
From	Great Brit	ain	•••	•••	•••	•••	21,667
"	Australia	•••					4,997
22	India			•••			2,024
22	Burmah		•••	•••			440
22	Tava	•••	•••	•••	• • •		967
22	America	•••		•••	•••	•••	100
							30,195
							00,200

15. Construction.—Additional to the stores mentioned in the early part of this report, the following goods were received at the wharves and forwarded to destination on behalf of the Construction Department. The tonnage of these goods is included in the figures given in the preceding tonnage statement:—

			£	s.	d.
Permanent Way	Material	•••	 14,646		
Bridgework			 13,172	2	3
Creosoted Timber	s and Sle	epers	 4,779		
Hardwood Sleepe	rs	·	 14,197	6	10
Rolling Stock			 10,489		8
Fencing			 6,694		9
Cement	• • •	•••	 267	17	
Tents and Poles			 133	0	0
Stationery			 78	2	6
Sundries			 79	8	0
			£64,539	3	3

16. Other Departments.—Since August all Government consignments arriving from oversea have been cleared and dealt with by us as Forwarding Agents. Up to the end of the year the quantity of stores handled in this manner for sundry other departments of the Government Service was 366 tons, the main portion of which consisted of small packages of a miscellaneous nature. We still continue to act as the local Port Agents for the C.S.A.R.

17. Insurance.—The premiums paid in 1906 for marine insurance amounted to £952 9s. 9d.,

and 18 claims were lodged of the total value of £59 6s. 2d.

Early in the year the Government established a fund whereby it accepted all shipping risks on its own cargoes to the extent of £5,000 in any one vessel. I think this movement is a correct one, and I hope that as time goes on the wisdom of it will be proved.

Since the opening of this insurance fund its operations have been extended to cover risks on

our warehoused stocks of stores also.

18. Home Indents.—The number of Indents forwarded to the Agent-General was 108, of the total value of £195,942 10s. 8d.

19. Sail Shop.—In 1906 the number of wagon covers repaired was 8,975, and in addition to

this 317 new sheets were dressed and put into circulation.

It was with regret that I had this year to report for the first time a case of fire. On two occasions in December fire broke out in our sail loft, but fortunately in both instances, owing to the action of the sprinkler installation and the prompt arrival of the Fire Brigade, the loss was not so serious as it might otherwise have been: the total damage being under £500. Up to the present no definite cause can be assigned to the origin of these fires, although the work is generally believed to be that of an incendiary.

The sail loft was referred to in my report of 1905 as being in dangerous proximity to our other buildings, and I am hoping that before the time arrives for reviewing the work of another year this workshop will be removed to a more suitable site. As it is the accommodation is insufficient to cope with the large number of repairs and other work, and we have had to find

relief by renting buildings elsewhere.

- 20. Sales of Scrap.—The sum realised by sales of scrap metal, rubber, packing cases, &c., during the year amounted to a total of £7,394 1s. 5d.
- 21. Capital Account.—At the close of last financial year (30th June, 1906) a sum of £16,000 had to be surrendered to the Treasury, and this has greatly curtailed the spending powers of the Department and our capacity for carrying stocks to meet emergencies, although the increased types of rolling stock and permanent way material make it essential that a larger capital should be maintained, which I trust Government will recognise by voting an amount to be set aside as an open capital account.
- 22. Accommodation.—It is with pleasure that I have this time to record the completion of the new General Store referred to by me a year ago. The building, although only half as large as was originally designed, has given relief which was long needed. In the main structure it is very satisfactory, but unfortunately those labour-saving appliances—the electric lift and crane—have not so far been a success. They are, however, receiving attention, and will doubtless prove ultimately a great saving in the handling of goods.
- 23. Amalgamation of Stores.—A Commission was appointed in the month of April, the outcome of which was that the Government decided to amalgamate the Stores of the Railway, Harbour, and Public Works Departments, and that all should be controlled by the General Stores of the Railway. The Harbour Stores were taken over from July 1st, and the system of accounting was entirely remodelled; the same method and rules being instituted as are in vogue in our District Stores—the Value Stock Book system being adopted. Stock was taken and the total valuation was verified with the books of the Harbour Department, and on the basis of these

figures the new system has been introduced. The stocks, I should mention, were valued at their original cost, and comprise many stores which have deteriorated, and others which have become obsolete. No instructions have yet reached me from the Government as to the actual figure at which these stores are to be taken over, and consequently they have not been included in the

which these stores are to be taken over, and consequently they have not been included in the stock balance of the Department at the end of the year.

A saving has been effected in administration, and I trust that the combination will uitimately help to standardise to a considerable extent the large variety of stores required for Government purposes, and maintain a high standard of quality. The combination will enable larger indents than formerly to be made up, which will secure for us more favourable prices, and the change will also prevent any chance of competition by officials in local buying.

At the latter part of the year it was also decided to supply stores of a general character to the Police and Cooks and I trust the principle may prove satisfactory to those conserved and

the Police and Gaols, and I trust the principle may prove satisfactory to those concerned, and

shew economy in expenditure.

To this amalgamation scheme can be attributed much of the increase in various items of expenditure during the last six months of the year, and more especially the increase in our local buying.

> E. B. KIRKMAN, Stores Superintendent.
